Interventions Applying to All Drivers
This handbook has no legislative sanction. For interpreting and applying the law, consult The Highway Traffic Act, and/or The Drivers and Vehicles Act and their regulations.
Establish Your Identity

The first time you apply for a Manitoba driver's licence, identification card or enhanced identification card you will be asked to show documents that prove your identity.

This requirement under Manitoba law is aligned with North American standards. Verifying identity before we issue a driver’s licence or identification card helps to protect all Manitobans from identity theft. It also ensures that Manitoba driver’s licences or identification cards are issued only to those who are in our country legally, whether as citizens, permanent residents, or visitors.

To prove your identity, you will need supporting documents that establish six key elements:

- Birth date
- Legal name
- Signature
- Photograph
- Manitoba residence
- Entitlement to be in Canada

For more information on the documents required to prove your identity, please see a copy of the brochure Establishing Your Identity or visit mpi.mb.ca.

## Air Brake Endorsement

- **Air Brake Endorsement**—permits the holder to drive vehicles equipped with Air Brakes in the class of vehicle for which the person is licensed. Drivers of a Class 3 truck registered as a farm truck equipped with air brakes are exempt from this requirement.

- Must pass knowledge test.
- Must pass Air Brake practical test for "A" (Authorized) endorsement.
- Must pass adjustment of the manual slack adjusters for "S" (Slack Adjuster) endorsement.
- There is no additional charge for the Air Brake practical test if it is completed at the same time you are road-tested for a higher class of licence.

## Footnotes

1. A bus is any vehicle with a seating capacity of at least 11 persons (including the driver) used primarily to carry passengers. It excludes vehicles used for personal transportation by the owner or with the owner’s permission.
2. School bus certificate is required. For further information contact the Manitoba Education, Training and Youth Pupil Transportation at 204-985-6500.
3. Mopeds are not allowed to be driven on highways with a speed limit exceeding 80 km/h, but may cross these highways.

*All charges are subject to change.*
Basic Class 5 Licensing Requirements

Who must take a driver test
You must take a driver test for the class of vehicle you wish to drive if you:

- have never been licensed for that class of vehicle;
- have not held a Manitoba licence within the past four years; or
- hold a licence from outside Canada, the United States or other jurisdictions whose licences are not exchangeable.

You may be required to be re-tested if you:

- have been involved in traffic accidents or convictions;
- have had your licence suspended; or
- have a disease or disability that may affect your ability to drive safely.

Graduated Driver Licensing
Drivers who applied for their first Class 5 Driver’s Licence on or after April 1, 2002 are in the Graduated Driver Licensing (GDL) Program and are subject to the GDL stages and restrictions.

Manitoba Class 5 Driver’s Licence Stages are:
- L Learner Stage (minimum 9 months)*
- I Intermediate Stage (minimum 15 months)**
- F Full Stage

* Supervising driver must be fully licensed and have under 0.05 blood alcohol content.
** A driver is only required to complete the Intermediate Stage once. Therefore, time served in the Intermediate Stage in Class 6 will be applied to the Intermediate Stage in Class 5.

Application and test requirements
An applicant for a Class 5 Learner Licence must be a minimum of 16 years of age. At age 15 1/2, an applicant may apply for a Class 5 Learner Licence if enrolled in a high school driver education course.

Consent of either a parent or legal guardian is required if the applicant is under 18 years of age.

A) Knowledge Test
i) For a Class 5 licence: Before taking the test, you must register as a Manitoba Public Insurance customer and provide proper identification documents. The most convenient way to register is through an Autopac agent as soon as possible. The test assesses your knowledge of traffic laws, safe driving practices and recognition of road signs. (It is not an open book test; cellular phones or electronic devices cannot be used during the test.) The test charge is $10 (subject to change) per test.

If you are in GDL and fail the knowledge test, there is a seven-day waiting period to retake it. Only one knowledge test per class of licence is allowed per day — if you are outside of the GDL program you are eligible to repeat a knowledge test the next working day.

If an applicant is under 18 years of age, parent or legal guardian approval is required to take the knowledge test. (See Forms section.) Driver education students under the age of 16 must provide a completed driver education form before taking the knowledge test for a driver’s licence.

ii) After passing the knowledge test and meeting the visual and medical standards, in order to drive you will be required to purchase a licence for $20 plus base driver premium charges of up to $45 (subject to change), plus any applicable additional driver premium.

B) Visual and Medical Requirements
Applicants who fail to meet minimum vision standards, with or without corrective lenses, cannot obtain a driver’s licence. If corrective lenses are required for driving, this will be indicated on your licence. Applicants who meet the minimum medical or vision standards may have their licence suspended until further information is filed. A vision and/or medical report may be required.

Before taking a knowledge test, an applicant for a driver’s licence who has a disease or disability that may affect their ability to drive safely must inform Medical Records, Box 6300, Winnipeg, Manitoba, R3C 4A4, 204–985–1900 or toll free at 1–866–617–6676.

** A driver is only required to complete the Intermediate Stage once. Therefore, time served in the Intermediate Stage in Class 6 will be applied to the Intermediate Stage in Class 5.

C) Road Test
The Class 5 road test not only measures your ability to operate a Class 5 vehicle, it also identifies errors that need to be corrected. You will be required to operate your vehicle in typical traffic situations in a safe and legal manner. You will be judged on your driving skills. Only authorized Manitoba Public Insurance employees may ride with you during the test.

Please ensure you check in 15 minutes before your appointment time.

You must supply a vehicle in good working order and a Vehicle Registration Certificate confirming the vehicle is properly registered and insured. The vehicle must have adequate seating for the driver examiner. Failure to do so will result in the cancellation of the road test and no refund of the test charge.

Road tests will not be conducted in heavy or agricultural equipment.

Applications for a driver’s licence who have not held a driver’s licence any time prior to April 1, 2002, from any jurisdiction, are subject to a nine-month learning period before they are eligible to take a road test.

An applicant who drives safely may have to obtain permission from the registrar before taking their next road test. If you are in GDL and fail the road test, there is a 14-day waiting period to retake it. If you currently hold an out of country driver’s licence or currently hold a Manitoba driver’s licence higher than a Class 5L/5A or 6L/6A, and are taking a road test, a test failure will result in declassifying your driver’s licence to a Learner or Authorized Stage. This will require you to have a supervising driver with you when driving a motor vehicle.

*Charges for Driver Education Program include one knowledge test.

Change of name or address
You are required to notify your Autopac agent or Manitoba Public Insurance within 15 days of any change in your name or address.

For more information please call us at: 204–985–7000 or toll-free at 1–800–665–2410.

Website: mpi.mb.ca
Test Appointments

How to Book Your Knowledge or Road Test

1. Visit any Autopac agent* to pay for your test and to schedule your test appointment.

2. The agent can provide you details of available appointments at any testing location.

3. You can schedule your test appointment up to eight weeks in advance.

Test Locations

Winnipeg
- 15 Barnes Street (at Bison Drive)
- 40 Lexington Park (at Gateway Road)
- 1284 Main Street
- 930 St. Mary’s Road (French Language Services available)
- 125 King Edward Street East
- 1103 Pacific Avenue
- 420 Pembina Highway

Outside Winnipeg
- Arborg | 323 Sunset Boulevard
- Beausejour | 848 Park Avenue
- Brandon | 731–1st Street
- Dauphin | 217 Industrial Road
- Portage la Prairie | 25 Tupper Street
- Selkirk | 1008 Manitoba Avenue
- Steinbach | 165 Park Road West, Unit 2, Clearspring Village Mall
- Thompson | 53 Commercial Place
- Winkler | 355 Boundary Trail

Mobile Test Units
Mobile Test Units serve rural customers living outside Service Centre communities. Locations and schedules are available from any Autopac agent.

*For a list of Autopac agents, see mpi.mb.ca.
Key Points About Your Tests

Cost*
• A knowledge test costs $10.
• Costs for road tests:
  • Class 1 licence: $50
  • Class 2 or 3 licence: $45
  • Class 4 licence: $35
  • Class 5 licence: $30
  • Class 6 licence: $30
  • Air Brake: $30**

*Cost may change

**There is no additional charge for the air brake test if you are taking a road test for a class
1, 2, 3, 4 or 5 licence and the vehicle you are using for the test is equipped with air brakes

No cost applies for tests in these two situations:
• You're 65 or older; or
• Our Medical Compliance and Assessments department requires you
to take the test

General Testing Information
• There is a 30 minute time limit to complete a knowledge test

• Both knowledge and road tests are conducted during weekdays
  only (with the exception of holidays) at most locations. Saturday
  appointments are available at some Winnipeg locations

• Only one knowledge or road test of the same class may be completed
  per day

• There is a waiting period between the knowledge and road test for
  some classes of licences

• If you are in Graduated Driver Licensing and are not successful on your
  knowledge test, there is a seven day waiting period before you may take
  the test again

• If you are in Graduated Driver Licensing and are not successful on
  your road test, there is a 14 day waiting period before you may take the
  test again

• The knowledge test is not an open book test. Cellular phones and
  electronic devices are not allowed in the test area

• Please check-in 15 minutes prior to your scheduled appointment time

If you need to call one of these locations other than to book a test appointment:
• In Winnipeg call 204–985–7000
• Outside Winnipeg call 1–800–665–2410
Graduated Driver Licensing

On January 1, 2003, Manitoba introduced a Graduated Driver Licensing Program (GDL) for Class 5 and 6 driver’s licences. Drivers who applied for their first Class 5 or Class 6 driver’s licence on or after April 1, 2002 are in GDL and are subject to the GDL stages and restrictions. GDL is a three-stage licensing process that is designed to help new drivers, regardless of age, acquire the knowledge and skill needed to safely operate a motor vehicle. Whether you are 16 or 60, GDL enables new drivers to gain experience under conditions where the risk of having a collision is lower.

The three stages of GDL are the Learner Stage, the Intermediate Stage and the Full Stage. Each stage has specific restrictions on new drivers that will reduce the opportunity and likelihood for them to engage in risky driving behaviour.

Class 5 Learner (L) Stage (Minimum 9 months)

The first licence for a new driver is a Learner Stage licence. To be eligible to apply for a learner licence, you must be at least 16 years of age or a minimum of 15 years, six months if enrolled in a high school driver education course. Parental consent is required if you are under 18 years of age. You must pass a knowledge test and meet the vision and medical standards. Learner drivers must follow these restrictions:

- Maintain zero blood alcohol content
- Be accompanied by a qualified supervising driver as the only front seat passenger. The supervising driver must have under .05 blood alcohol content, must hold a valid licence and have held a Full Class 5 licence for at least three years.
- Restrict other passengers to the back seat(s) up to the number of functioning seat belts in the back seat of the vehicle
- No towing of vehicles
- No operating of Class 3 motor vehicles registered as a farm truck
- No operating of off-road vehicles along or across highways

Class 5 Intermediate (I) Stage (Minimum 15 months)*

To graduate to this stage, you must pass a road test. While in the Intermediate Stage, you must follow these restrictions:

- Maintain zero blood alcohol content
- Restrict passengers between 5 a.m. to midnight to one passenger in the front seat and passengers in the back seat(s) up to the number of functioning seat belts in the back seat of the vehicle
- Restrict passengers between midnight to 5 a.m. to either one passenger or a qualified supervising driver in the front seat and passengers in the back seat(s) up to the number of functioning seat belts in the back seat of the vehicle

Drivers in the Intermediate Stage may tow vehicles, may operate a Class 3 motor vehicle registered as a farm truck, and may operate off-road vehicles along or across highways. Drivers in the Intermediate Stage, if they are 18 or over and meet the vision and medical standards, may also apply for Authorized Instruction in licence Classes 1–4.

* A driver is only required to complete the Intermediate Stage once. Therefore, time served in the Intermediate Stage in Class 5 will be applied to the Intermediate Stage in Class 6 and vice-versa.

Class 5 Full (F) Stage*

After spending a minimum of 15 months in the Intermediate Stage, you will graduate to the Full Stage. For the first 36 months you must continue to maintain zero blood alcohol content. You are eligible for a Full Class 1-4 driver’s licence after passing appropriate tests, are at least 18 years of age and meet medical standards. You may supervise novice drivers after three years in the Full Licence Stage.

* The law about blood alcohol content (BAC) changed in December 2006.

If you entered GDL before the law changed:
- you must have no alcohol in your blood for the first 12 months.
If you entered GDL after the law changed:
- you must have no alcohol in your blood for the first 36 months.
## Graduated Driver Licensing Class 5

### Zero Blood Alcohol Content (BAC) Restricted

<table>
<thead>
<tr>
<th>Issue 5 L (Learner)</th>
<th>Issue 5 I (Intermediate)</th>
<th>Issue 5 F (Full)*</th>
</tr>
</thead>
<tbody>
<tr>
<td>Minimum 9 months</td>
<td>Minimum 15 months</td>
<td>36 months</td>
</tr>
</tbody>
</table>

- **Pass knowledge test**
- **Pass road test**
- **Graduate to Full Stage**
- **Full Stage**
  - Zero Blood Alcohol Content restriction for first 36 months
  - May upgrade to "Full" Class 1–4 after passing appropriate tests
  - May supervise after 3 years in "Full" stage

### Learner Stage
- Minimum age 16 (15 if in a high school driver education course)
- Must pass knowledge test
- Minimum nine months in this stage, excluding licence interruptions
- Zero Blood Alcohol content
- Only supervising driver as front seat passenger
- Supervising driver must be fully licensed driver for at least 3 years and be under .05 blood alcohol content
- May carry passengers up to the number of functioning seat belts in the rear of the vehicle
- No towing permitted
- May not operate a Class 3 motor vehicle registered as a farm truck
- May not operate off-road vehicles along or across highway
- May not obtain Authorized Instruction in Classes 1–4
- May operate heavy and agricultural equipment while accompanied by a supervising driver

### Intermediate Stage*
- Must pass Class 5 road test to enter this stage
- Minimum 15 months in this stage, excluding licence interruptions
- Zero Blood Alcohol content
- Passenger limits:
  - From 5 a.m. to midnight one passenger in the front seat and restricted to the number of functioning seat belts in the rear of the vehicle
  - From midnight to 5 a.m. one passenger, or if any additional passengers, a supervising driver in the front seat and restricted to the number of functioning seat belts in the rear of the vehicle
- Towing permitted
- May operate heavy and agricultural equipment
- May operate a Class 3 motor vehicle registered as a farm truck
- May operate off-road vehicles along or across highway
- May apply for Authorized Instruction in Class 1–4 if at least 18 years of age, and meet medical standards

*Time served in the Intermediate Stage in Class 6 will be applied to the Intermediate Stage in Class 5. Therefore a driver is only required to complete the Intermediate Stage once.

### Full Stage
- Zero Blood Alcohol Content restriction for first 36 months
- May upgrade to "Full" Class 1–4 after passing appropriate tests
- May supervise after 3 years in "Full" stage

---

**Keep your licence valid!**
The Manitoba driver's licence is valid for up to 5 years. The driver's licence charge and base driver premium are assessed annually and due for payment on your anniversary date which is four months less one day after your birthday, e.g. if your birthday is September 21, your anniversary date is January 20. If drivers in the Learner or Intermediate Stage do not keep their licence active, they will not earn credit for the period of time they are not licensed. If you own a vehicle, your Autopac will be renewed and expire at the same time as your driver's licence.

---

*The law about blood alcohol content (BAC) changed in December 2006.*

If you entered GDL before the law changed:
- You must have no alcohol in your blood for the first 12 months.

If you entered GDL after the law changed:
- You must have no alcohol in your blood for the first 36 months.
**Authorized Instruction (A) Stage (non-GDL Learner Stage)**

An Authorized Instruction Stage applies to:
- Drivers who held a learner’s licence prior to April 1, 2002;
- Experienced drivers whose licence has been de-classed;
- Experienced drivers transferring to Manitoba and requiring driver examinations;
- Drivers who are learning to operate Class 1–4 vehicles; or
- Operators of heavy and agricultural equipment.

**Drivers with a Class 5 Authorized Instruction Licence must:**
- Be at least 16 years of age;
- Maintain zero blood alcohol content;
- Be accompanied by a supervising driver, as the only front seat passenger. The supervising driver must be under .05 blood alcohol content, hold a valid licence and have held a Full Class 5 licence for at least three years;
- Not operate a Class 3 motor vehicle registered as a farm truck;
- Not operate off-road vehicles along or across highways.

For Classes 1–4 Authorized Instruction, you must hold a minimum Class 5 Authorized Instruction or a Class 5 Intermediate Stage Licence and
- Be a minimum of 18 years of age;
- Pass the knowledge test and meet the vision and medical standards;
- Complete a minimum two week learning period;
- Maintain zero blood alcohol content if you are restricted to zero blood alcohol content in a Class 5;
- Be accompanied by a supervising driver who holds a valid licence, has held a Full Class 5 licence for at least three years, and a licence in the class of vehicle being driven for at least two years. The supervising driver must be under .05 blood alcohol content.
Manitoba’s One-Piece Driver’s Licence

When you are issued a new Manitoba driver’s licence, you will be provided with a temporary driver’s licence certificate (valid for up to 45 days). You must carry your temporary driver’s licence certificate with you at all times until you receive your permanent driver’s licence in the mail.

When you get your first driver’s licence, you will be photographed at your Autopac agent or at a Manitoba Public Insurance Service Centre. You’ll need a new photo every five years.

Manitoba’s new one-piece driver’s licence

Drivers under the age of 18 years are issued Photo Cards that show the exact date of the driver’s 18th birthday.
Renewals Last Five Years
Your licence could be valid for up to five years. You’ll still pay for your driver’s licence each year. We’ll send you a Statement of Account each year between renewals, to tell you how much you owe. Changing everyone over to five-year renewals will take a few years. Until the changeover is finished, your driver’s licence may last from one to five years.

Your driver’s licence must be in your possession at all times while driving and must be produced, along with the Vehicle Registration Card, when requested by a peace officer.

Keep Your Licence Valid
The Manitoba driver’s licence is valid for up to five years. Your licence expiry date is printed on the front of your licence. It is your responsibility to know when your licence expires and renew it.

Each year your licence will be reassessed. You will be required to pay for your driver’s licence every year on your anniversary date, which is four months less a day after your birthday e.g. if your birthday is September 21 your anniversary date is January 20. If you are in the Learner or Intermediate Stage and do not pay the assessed charges for your licence by the anniversary date your licence will not be valid. You will not earn credit for the period of time you are not licensed.

Illegal Use of Drivers Licence
You may be fined and your driver’s licence suspended if you misuse a driver’s licence, by:

- allowing someone else to use your driver’s licence;
- misrepresenting yourself when applying for a driver’s licence;
- using an outdated or otherwise invalid licence;
- altering, in any way, a registration card, a licence, a motor vehicle liability insurance card or a certificate of insurance;
- providing false identification when applying for a driver’s licence or permit, or
- holding, at any time, more than one valid driver’s licence from Canada or the United States.
Operating Heavy and Agricultural Equipment

A valid Class 5 Intermediate Stage licence or higher is required to operate heavy and agricultural equipment on provincial highways and roads in urban areas. These types of vehicles include tractors, self-propelled farm equipment such as combines, and heavy equipment such as front-end loaders, cranes, forklifts and graders. Provincial highways and urban roads do not include rural municipal roads, service roads or winter roads controlled or maintained by a local government, such as a rural municipality.

Any person whose driver’s licence is prohibited, suspended and/or disqualified for any reason can be charged with driving while suspended/disqualified if they are operating heavy or agricultural equipment on provincial highways and roads in urban areas. A conviction for this offence may result in a further suspension of their driving privileges up to and including lifetime.

Any driver who is subject to a Zero Blood Alcohol (0 BAC) restriction while operating a Class 1 to 5 motor vehicle will also be subject to the 0 BAC restriction while operating heavy and agricultural equipment on any roadway.

If you have any questions about operating heavy or agricultural equipment, please contact:

Toll-free: 1–866–323–0543
**Seatbelts**

All drivers and passengers must wear the complete seatbelt assembly, where a seatbelt assembly is provided, unless exempted by law. Ensure the seatbelt is worn properly. It must be snug over the shoulder and across the hips. The seatbelt fabric must be flat and not twisted, and is kept over the shoulder and not under the arm. It is the driver’s responsibility to ensure that every minor is properly secured.

Automatic seatbelt assemblies should not be used to restrain children in infant restraint devices situated in the right front passenger seat. This refers to a seatbelt that automatically locks into place when the door is closed. Consult your owner’s manual regarding the securement of child or infant restraints in this seating position.

No person shall operate a motor vehicle where the seatbelt assembly has been removed or has been modified to reduce its effectiveness.

Vehicle accidents are the leading cause of the head injuries suffered by thousands of Manitobans every year. Seatbelts play a significant role in reducing head injuries.

**Infant and Child Restraints**

**Rear-Facing Infant Seats**

Infants under 10 kg (22 pounds) or less than one year of age do not have the muscle strength in their back and neck to travel safely in the forward-facing position.

The infant seat is positioned to face the rear of the vehicle, is used in a semi-reclined position and is fastened into the vehicle by the seatbelt to prevent it from moving during an impact or sudden stop. In a collision, the forces of impact are spread evenly across the strongest part of the baby’s body and are absorbed into the back of the infant seat.

Most infant seats are designed to hold babies from birth to 10 kg (22 pounds). The statement of compliance label, which is affixed to the seat, states the size of child for which the seat is designed.

If your baby reaches the maximum weight limit of your infant car seat before the age of one year, consider purchasing a convertible car seat with a higher rear-facing weight limit. A convertible car seat is a rear and forward-facing car seat all in one, and some models may be used in the rear-facing position for infants up to 16 kg (35 pounds).
Forward-Facing Child Car Seats
Forward-facing child car seats are to be used for children from the time your child outgrows the rear facing seat at around a year old until your child weighs 18 kg (40 pounds) and is about 4 years of age. These seats must be anchored to the vehicle by a tether strap, which prevents the seat from bending or pitching forward or sideways in a crash. The tether strap is fastened to the top of the child restraint and hooks onto an anchor bolt assembly, which is installed in the metal framework of the vehicle. It must be installed exactly according to the child car seat manufacturer’s instructions. **Call your vehicle manufacturer for information on anchor bolt installation or check the vehicle manufacturer’s manual for the location of the anchor bolt holes in your particular vehicle.**

Booster Seats
Booster seats are for children who weigh between 18 and 36 kg (40–80 pounds) and are not yet ready for a regular lap or shoulder/lap-belt. The booster seat is a restraining system for holding the seatbelt in a position low and snug over the child’s lap, and the shoulder belt across the child’s chest. Household booster seats are not intended for use in vehicles, so check the compliance label to ensure the seat you choose meets Canada Motor Vehicle Safety Standards.

Children have outgrown the booster seat when they have reached height and weight limit prescribed by the manufacturer. At this point, they should begin wearing a shoulder/lap-belt combination.

**Note:** The safest place in a car to position any infant or child restraint system is in the centre of the back seat.

Seatbelt Assembly
A child is ready to use the vehicle seatbelt system when they are between 8 and 12 years of age. Take the time to explain how to wear it. To be effective in preventing injuries, lap and shoulder belts should always be used if possible and worn snugly and as low on the hips as possible. The shoulder harness should not lie across the child’s face or neck. Never put it under the child’s arm, since this could crush the rib cage during impact.
The chances of being killed in an accident can be decreased by as much as 70% if you wear seatbelts. Shoulder belts further increase your safety.

Rear facing infant seat: for infants to 10 kg (22 pounds). Birth to around 1 year old.

Forward facing child seat: for children 10 to 18 kg (22 to 40 pounds). About 1 to 4½ years old.

Seatbelts and booster seats: for children who have reached 18 to 27 kg (40 to 60 pounds). About 4½ to 8 years old.

Seatbelts and shoulder belts: for adults and older children who have outgrown their booster seats. Older children over 27 kg (60 pounds), about 8 to 12 years old, should continue to be seated in the back seat away from airbags.
Safe and Legal Driving Practices
1. Signs and Signals

Signs, signals and pavement markings help indicate the rules of the road designed for the safe movement of vehicles, pedestrians and cyclists. As a driver, you are required to know them. The shapes of signs enable you to identify them in darkness, fading light, fog, rain or snow.

**Sign Shapes and Colours**

Fluorescent yellow-green pentagon indicates school area. Drive cautiously. Children could be crossing the street.

Diamond warns you of possible dangerous conditions, either on or near the roadway (e.g., a sharp curve, turn, side road, intersection, narrow bridge). Slow down to keep full control of your vehicle.

Octagon is used only for stop signs. Always come to a complete stop.

Triangle with the tip pointing down means you must yield the right-of-way. Slow down and, if necessary, stop.

Triangle with each tip cut off indicates a slow-moving vehicle.

Crossbuck indicates a railway crossing. Always slow down and look both ways for trains before crossing the tracks. You must yield the right-of-way to trains.

Square or Rectangular signs regulate traffic and direct the driver.

**Note:** Times listed on signs follow the 24-hour clock so that:

- 00:00 = 12:00 midnight
- 01:00 to 12:00 noon remains the same.
- 13:00 = 1:00 p.m.
- 14:00 = 2:00 p.m.
- 15:00 = 3:00 p.m.
- 16:00 = 4:00 p.m.
- 17:00 = 5:00 p.m.
- 18:00 = 6:00 p.m.
- 19:00 = 7:00 p.m.
- 20:00 = 8:00 p.m.
- 21:00 = 9:00 p.m.
- 22:00 = 10:00 p.m.
- 23:00 = 11:00 p.m.
Warning Signs
These signs warn of possible dangerous conditions immediately ahead.

- Very sharp right turn ahead
- Divided highway begins ahead
- Sharp right curve, maximum recommended speed: 40 km/h
- Divided highway ends ahead
- Pedestrian crosswalk ahead
- Two-way traffic ahead
- Winding road ahead
- Right lane ends ahead
- Road ends. Exit right or left
- Left lane ends ahead
- Bump ahead
- Merging roadways ahead
- Steep hill ahead
- Hidden intersection ahead
Warning Signs

- **Bridge ices**
  - [Image of bridge ices sign]

- **Narrow bridge ahead**
  - [Image of narrow bridge ahead sign]

- **Stop ahead**
  - [Image of stop sign]

- **Traffic signals ahead**
  - [Image of traffic signals ahead sign]

- **Playground ahead**
  - [Image of playground ahead sign]

- **Deer crossing area ahead**
  - [Image of deer crossing area ahead sign]

- **Road slippery when wet**
  - [Image of road slippery when wet sign]

- **Roundabout**
  - [Image of roundabout sign]

- **School area indicated by fluorescent yellow-green pentagon**
  - [Image of school area sign]

- **Hazard marker showing an obstruction**
  - [Image of hazard marker sign]

- **Low structure clearance 4.1 m**
  - [Image of low structure clearance sign]

- **Right curve ahead**
  - [Image of right curve ahead sign]

- **School crosswalk ahead**
  - [Image of school crosswalk ahead sign]

- **Railway crossing advance warning. Track position indicates the angle the railway tracks cross the road**
  - [Image of railway crossing advance warning sign]

- **Traffic island ahead**
  - [Image of traffic island ahead sign]

- **Pavement ends**
  - [Image of pavement ends sign]
Maximum recommended speed on exit 40 km/h

Reserved Bus Lane ahead.

Reserved Lane located in curb lane of cross-street. If turning right, enter the second lane from the curb.

Reserved Lane located in median lane of cross-street. If turning right, enter the curb lane.

Prepare to stop. When the amber lights on the sign are flashing, approaching drivers should be prepared to stop, as the traffic signal ahead is red or about to turn red.

Railway Crossing Sign: This railway crossing sign is equipped with warning lights and bells. When the lights are flashing and the bells are ringing, be prepared to stop as they warn you of an approaching train.

The number on the square sign under the railway crossing sign indicates the number of train tracks. Refer to the Railway Crossing section for further information.
**Construction and Maintenance Signs**

These signs warn you of road construction and maintenance areas ahead. **Slow down to a safe speed.** At some locations maximum speed limits are posted.

Drivers must **watch for and obey** the instructions of flagpersons.

- Maximum speed **40 km/h when meeting traffic**
- Maximum speed **60 km/h when passing workers**
- Flying stones
- Part of roadway has been removed
- Construction area
- Trucks entering on the right
- Flagperson ahead
- Road work
- Bump ahead
- Pavement edge drop-off
**Regulatory Signs**

These signs regulate your driving, informing you about speed limits, permitted turns, stopping and parking rules.

**Regulatory Signs**

- **Parking is prohibited**
  - This lane of traffic must turn right during the times shown, except buses and cyclists

- **Do not stop to wait**
  - This lane of traffic must turn left

- **Parking permitted as indicated**
  - This lane of traffic may go through or turn right only

- **Stop here for red traffic signal**
  - Through traffic is not permitted to use this lane. Traffic, having entered this lane, must turn left at the next intersecting private approach or public street

- **Two-way traffic**
  - Pedestrian Corridor

- **Do not pass**
  - Pedestrian Crosswalk

- **Passing permitted**
  - School Crosswalk

- **Slower traffic keep right**
  - Do not enter
  - Except buses and cyclists
  - Snow Route
  - No stopping during a declared “snow emergency”

- **Keep right except to pass**
  - Buses only
Guide and Information Signs

These tell you where you are, what road you are on or how to get to certain places. There are many different types of these signs, such as service signs, location signs, route marker information and distance signs. They vary in size and colour.

- **Eastbound Trans-Canada Highway**
- **Westbound Provincial Trunk Highway**
- **Southbound Provincial Road**
- **Northbound City route turns right**
- **Cul-de-sac (Dead end with turnaround)**
- **Airport with scheduled service**
- **“A” indicates an alternative route that will return to the route you are on**
- **Hospital**
- **Camping site**
- **Travel Information**
- **Picnic site**
- **Access for disabled persons**
- **Stop for school bus when signals flashing**
**Stop Signs**

At a stop sign, you must come to a complete stop at the appropriate places illustrated below. Before proceeding from a stopped position, you must check and yield the right-of-way to pedestrians wanting to cross the street. When pedestrians are clear, you may then slowly move forward for a better view of traffic and, when safe to do so, you may then proceed to turn or cross the street.

The following illustrations indicate the correct places for stopping.

Stop before the stop line.

Where there is no stop line, stop just before the sidewalk.

If there is no stop line or sidewalk at the intersection, stop just before the intersecting highway.

**Four-way Stop Signs**

At an intersection controlled by a four-way stop sign, the vehicle that stops first should go first. After stopping and yielding to any pedestrians wanting to cross, roll slowly forward to show your intent to proceed. If two or more vehicles stop at the same time, the vehicle on the left should yield to the vehicle on the right.
**Yield Right-of-Way Signs**

A yield sign means slow down as you near an intersection. Check for pedestrians and traffic. If there is traffic or pedestrians, **stop** and yield right-of-way.

Yield signs are usually located where a lane or road merges with another lane or road. You must slow down and be prepared to stop. Be careful when checking for traffic so that you do not run into the car ahead of you.

**Traffic Control Signals**

**Red** — Stop in front of the marked crosswalk or, if there is no marked crosswalk, before the sidewalk out of the way of pedestrians and vehicles. Unless a sign shows otherwise or vehicle/pedestrian traffic does not permit, you may, after stopping completely, turn right. You may also turn right or left from a one-way street to another one-way street.

**Amber** — An amber light is a warning that the light is going to turn red. Slow down and stop — never accelerate to “make the light.” If you are already in the intersection when the light turns amber, continue through.

**Green** — You may proceed, but you must yield the right-of-way to pedestrians in the crosswalk and to other vehicles already in the intersection. To turn left, you may enter the intersection on a green light, but you must yield to pedestrians and oncoming traffic, and you may have to complete the turn during an amber or red light.
**Flashing Red** — Come to a complete stop, proceeding only when safe.

**Flashing Amber** — Slow down and be prepared to stop. You must yield the right-of-way to pedestrians.

**Amber Arrow** — A steady amber arrow may be shown after a green arrow. The amber arrow is a warning that oncoming traffic may next receive a green signal. Slow down and stop. If you are already in the intersection when the amber signal appears, continue and complete your turn.

**Green Arrow** — You may proceed only in the direction of the arrow, either steady or flashing, providing you are in the proper lane.

**Flashing Green Left-Arrow** — You may proceed only to make a left turn, unless facing another signal that indicates other movements are allowed. (Flashing left-arrows may be shown together with steady red, amber or green lights.)

**Green U-Turn Arrow** — You may proceed to make a U-turn after yielding to pedestrians and other vehicles already in the intersection.

**Green Left-Arrow with Red Light** — When a green left-arrow is shown with a red light together you may proceed and make a left turn only. It is illegal to make a right turn at an intersection when a green left-arrow is shown with a red light, even if there is no sign indicating a right turn is prohibited on a red light. Under no circumstances are you allowed to turn right or drive straight through when a green left-arrow is illuminated with a red light. If a green left-arrow is illuminated alone (the red light is not on) you may turn right if it is safe to do so and no sign prohibits it.
**Transit Priority Signal**

A signal light with a white vertical bar on a black background allows transit buses to proceed before other traffic. Only public-transit vehicles (buses) may proceed when the Transit Priority Signal is shown, while other vehicles must remain stopped. (The Transit Priority signal is always accompanied by a steady red light).
Pavement Markings
A solid line on the left of your lane means you must not pass or change lanes. A broken line means you may pass or change lanes if safe both front and rear. It is permissible to turn left over a single or double solid line onto a public thoroughfare, private road or driveway.

Yellow lines
Yellow lines indicate traffic moving in opposite directions.

- **Broken line** — Passing is permitted.
- **Solid and broken line together** — Passing is not permitted if the solid line is on your side of the highway.
- **Double solid line** — Passing is prohibited for traffic going either way.

White lines
White lines indicate traffic moving in the same direction.

- **Solid line** — Lane changing is not permitted.
- **Broken line** — Lane changing is permitted.
- **Stop line** — You must stop before this line.
No traffic is permitted within Painted Left-Turn Islands, which are commonly used in rural areas to channel traffic into turning lanes.

Reserved Lanes
In some urban centres, to improve the safety and flow of designated vehicles, certain traffic lanes have been reserved for their use only. Traffic signs identify the vehicles that the lanes are reserved for. The reserved lanes are marked by double broken lines and white diamond patterns.

The following are some examples of how reserved lanes are used:

1. With-Flow Reserved Lane
   A curb lane is reserved for use by designated vehicles only. Motorists making right turns are permitted to enter the reserved lane at any point in the block preceding their turn.

   **Pavement Markings**
   Double broken white lane lines and diamond symbols designate the reserved lane.

   **Turning Right onto a Reserved Lane**
   If you are turning right onto a street with a Diamond Lane in the curb lane, you must turn as close as practicable to the curb and into the first lane. You should then signal, check and change lanes out of the Diamond Lane into the adjacent lane as soon as it is safe to do so. If you are driving parallel to a Diamond Lane and need to turn right, you can enter the Diamond Lane but you must turn right at the next intersection.
2. **Contra-Flow Reserved Lane**

A curb lane on a one-way street is reserved for use by designated vehicles only. Designated vehicles travel in the opposite direction of traffic.

**Pavement Markings**

Double solid yellow lane lines and white diamond symbols designate the contra-flow lane.
2. Starting from a Parked Position, Lane Changing, Curves and Turning

Starting Out

Steering — Hand Position
Most vehicles are equipped with power steering and adjustable steering wheels that make operating the vehicle easier and more comfortable for the driver. It is recommended that the steering wheel be held with your hands at the 9 o'clock and 3 o'clock position. This will allow for good control and, in the event of an accident and the vehicle is equipped with an air bag, it will inflate without injuring or being obstructed by the driver's arms. The driver of a vehicle should never turn the steering wheel with one hand (palming the wheel) or with one finger as they may not have full control of the vehicle.

Accelerator
To set a vehicle in motion, you have to accelerate smoothly and gradually to avoid jerking the vehicle. The driver's foot should lie flat on the accelerator with the heel on the floor. For optimal engine performance, the driver should avoid abruptly applying and releasing the accelerator.

Drivers should accelerate slowly and steadily when starting from a stop. By doing this, drivers have more control over the vehicle. If the vehicle is over accelerated particularly on poor or slippery road surfaces, the wheels can lose traction and could cause loss of control.

Automatic Transmission
Many vehicles have transmissions that change gears automatically in response to speed and acceleration, by means of mechanical, electrical or hydraulic controls.

Drivers of such vehicles can also shift down to a lower gear for increased braking power when descending a hill. Downshifting prevents the transmission from automatically changing into a higher gear, keeping the vehicle speed slower. This can be very helpful in keeping the vehicle's brakes cooler as they will not have to be used as often when descending a steep hill.
This is an example of how the gears on an automatic transmission could be used:

- **P (park)**: for starting the engine, stopping for an extended length of time and parking.
- **N (neutral)**: for starting the engine, disengages the engine from the drive wheels.
- **R (reverse)**: for backing up (bring the vehicle to a complete stop before changing from a forward gear to reverse and vice versa).
- **D (drive) or 2–5**: for normal forward driving conditions.
- **2–3/2–4**: lower gears for driving with heavy loads.
- **2**: for driving on slippery surfaces or up or down steep inclines.
- **1**: for driving very slowly when off the highway.

**Manual (Standard) Transmission**

Shifting gears in a vehicle equipped with a manual transmission is a skill which requires considerable practice. The driver operates a clutch pedal with the left foot while manually selecting the desired gear range by moving a gear shift lever with the right hand.

The clutch is used to make, or break, the connection between the vehicle’s engine and its transmission. When the pedal is up, the connection is engaged and the power of the engine can then be transmitted to the drive wheels of the vehicle.

When the clutch pedal is pressed down, the connection is disengaged which prevents the transfer of engine power. It is while the connection is disengaged that the driver will change gears.

As the driver begins to let up on the clutch pedal the re-establishment of the connection will be felt before the pedal is fully released. The point where this first occurs is called the “friction point”.

It is at this friction point that the driver must coordinate the further release of the clutch pedal with the use of the gas pedal to achieve a smooth shift and prevent engine stalling.

Shifting patterns vary as do the number of available gears. Your owner’s manual will describe the shifting pattern for your vehicle.

Having the ignition switch in the off position, you can practice moving the gear shift lever into its various positions until you are sure of the locations and can find each gear without looking.
When starting the engine of a vehicle equipped with a manual transmission, your selector lever should be in the neutral position and your clutch pedal should be fully depressed.

When driving manual-transmission vehicles, it is important to select the proper gear so your engine neither lugs (moves the vehicle in rough, bumpy fashion) nor races (revs the engine but does not move the car effectively). If the engine begins lugging, you must shift to a lower gear. If it starts to race, a higher gear range must be selected. Your owner’s manual will provide you with the approximate speeds at which you should shift.

Once you have the vehicle in motion and have completed shifting gears, be sure to remove your foot from the clutch pedal. Leaving your foot on the clutch pedal unnecessarily is called “riding the clutch” and can cause excessive clutch wear.

When you are required to brake or come to a stop, you should avoid depressing the clutch too soon to avoid coasting to your stop.

When turning corners, be sure that your vehicle is in the proper gear for the speed at which you are turning.

**Clutch**

The clutch makes it possible to disengage the transmission and the engine. By pressing the clutch pedal, the connection is broken between these two components, allowing the driver to change gears. The clutch pedal must be pressed with the left foot and held to move the gear lever. Avoid releasing the clutch too quickly. This can damage components leaving the vehicle inoperable. Also, do not let the clutch out too slowly or release it only enough to hold the vehicle from rolling on a hill when stopped. This will cause the clutch to heat excessively and wear out prematurely.
**Starting**

Before starting out from a parked position on a street, the driver must first turn on the signal furthest from the curb or use the appropriate hand signal and then shoulder check before moving. This warns drivers about to turn into that lane that the parked car intends to move from a parked position. These cars have sometimes been struck by other cars whose drivers were surprised by the parked car suddenly moving.

**Lane Changing**

Before changing lanes, check your rearview mirror for traffic and signal your intention to move to the right or left. Check blind spots by shoulder checking before changing lanes. Move into another lane only when safe. When changing across multiple lanes, it is acceptable to make one shoulder check and signal to change over a number of lanes at one time, as long as the movement can be completed safely. If you must use mirrors only to check to the side and rear (unable to shoulder check) you can only change one lane at a time.

Remember:

* Never change lanes at intersections.
* Signals and checks are required before moving away from a straight line (approximately one metre) such as when manoeuvring past parked vehicles.

**Blind Spots**

1. With the inside rearview mirror:
   You can see A.
   You can’t see B or C.

2. With the sideview mirror:
   You can see B.
   You can’t see A or C.

3. With both mirrors and a shoulder check:
   You can see A.
   You can see B.
   You can see C.
Hand Signals
If your vehicle signals don’t work, use these hand signals:

**Left Turn**
Left arm extended straight out

**Right Turn**
Left arm out and bent upwards

**Stop**
Left arm extended out and bent downwards

Curves
Slow down before entering a curve and avoid braking in the curve. If you do enter a curve too fast, don’t jam on the brakes; instead, apply them carefully to keep control. When entering a left-hand curve, steer toward, but not over, the centre of the road, and when entering a right-hand curve, steer toward the right side of the road.

Beware of drivers who may have strayed into part of your lane.

General Rules of Turning
1. Decide well in advance where you are going to turn, and move into the appropriate lane, following the correct lane-change rules.
2. Once you are in the proper lane, signal at least 30 m before the turn.
   Outside cities, towns or villages, signal at least 150 m before turning.
3. For cars with manual transmissions, shift to the proper gear before turning.
Right Turns
Right turns must be made from the right lane nearest the curb into the right lane nearest the curb of the other road, unless it is blocked within 30 m of the intersection. In that case, you can turn into the next lane nearest the right if no other traffic is approaching in that lane (i.e., a vehicle coming from the opposite direction also turning onto that street).

Making Right Turns Correctly
Making Right Turns Correctly

![Diagram showing making right turns correctly]

Making Right Turns in Towns and Villages
Some communities have a white line on the right side of the road. The area to the right of this line is the shoulder of the road. Stay to the left of the white line to make your turn (refer to Figure A). Extra caution should be taken when turning right as there may be someone driving illegally on the shoulder. On wide roads without white lines on the right side, keep well over to the right if you are turning right (refer to Figure B).

![Figure A](image1)
![Figure B](image2)
Making Right Turns on Highways in High-Speed Areas
On highways outside towns and villages, solid white pavement markings identify the edge of the road, and the area to the right of this line is identified as the shoulder. The shoulder may be gravel or pavement. Do not drive on shoulders as they are intended as a safe place for stopped or disabled vehicles. A careful driver, however, should make a reasonable effort to get off the travel lanes as quickly as possible when turning right while being followed by high-speed through vehicles.
Left Turns

Left turns are more dangerous than right turns because of oncoming traffic. Different types of streets require different left turn procedures. Only make a left turn when it is legal and safe.

When approaching the intersection, check for signs that may prohibit or restrict turns. Before making a left turn, enter the proper lane well before the intersection.

When approaching the intersection, signal for the turn and watch for:

- pedestrians at the crosswalk;
- traffic coming from your left and right;
- any vehicles established in or blocking the intersection; and
- traffic approaching from the opposite direction.

Never enter any intersection:

- if it is not safe to do so;
- if you will not be able to clear the intersection because traffic is backed up in the lane you wish to enter; or
- if the intersection is blocked.

Making Left Turns on a Green Light

If you have stopped at a red light, when the light turns green, you must move into the intersection if it is safe. Before moving ahead, you must check:

- for pedestrians crossing in front of you; and
- for traffic coming from left and right (watch for vehicles attempting to race the amber light).

If you are approaching an intersection and the light is green:

- check to make sure the intersection is clear;
- it is safe for you to enter; and
- the light is still green.

When it is safe, move ahead to just before the centre of the intersection and just to the right of the directional oncoming line.
**Making Left Turns on a Green Light**

Once established in the intersection you may clear the intersection when it is safe and if:

- there is no pedestrian traffic crossing the lanes you wish to turn into;
- there is a break in traffic big enough to complete your turn safely without interfering with oncoming vehicles; or
- no other vehicles are approaching.

If the light turns yellow or red while you are established in the intersection, watch for traffic slowing down to stop and complete your turn when it is safe. Always be alert to drivers attempting to race an amber light (if you are not already established in the intersection, you must not attempt the left turn when the light changes from green).
Making Left Turns from Two-Way onto another Two-Way Street
• Well ahead of the turn, look for any following vehicles, signal and move close to the centre line.
• Slow down and look both ways before starting turn.
• Enter the intersection to the right of the directional dividing line.
• Make your turn to the left of the centre of the intersection.
• If turning onto a four-lane highway outside a city, town or village, move to the right after completing the turn, if traffic permits.
**Making Left Turns When Two Lanes Can Turn**

Complete this turn the same as any other turn except when two lanes are allowed to turn left at the same time. The vehicle closest to the median must complete the turn and stay in the lane closest to the median on the street being turned onto. The vehicle second from the median must turn into the second lane from the median on the street being turned onto. When turning with vehicles beside you that are also turning, watch for vehicles that may not stay in their own lane and be prepared to avoid them.
Making Left Turn from a Street with a Stop sign onto a Street with a Boulevard

- Make a complete stop.

- Check traffic and when there is no traffic coming from the left or traffic turning in front of you and it is safe, proceed. If traffic is approaching from the right establish your vehicle in the intersection.

- Complete your turn when it is safe, to the left of the centre of the intersection in the boulevard area.
Making Left Turns from One-Way onto another One-Way Street

- Signal well ahead of the turn and, when safe, move into the far left lane of the street.
- Slow down and begin your left turn after checking for traffic.
- Turn into the lane closest to the left curb unless blocked within 30 m of the intersection.
- Unless otherwise indicated, you may turn left from a one-way street to a one-way street on a red traffic light, after stopping and yielding the right-of-way to pedestrians and other traffic.
Making Left Turns from One-Way onto Two-Way Street

- Signal well ahead of the turn and, when safe, move into the left lane closest to the left curb unless blocked within 30 m of the intersection.
- Slow down and begin the left turn from a point as close as possible to the left curb or edge of the roadway.
- When entering the two-way street, turn into the lane immediately to the right of the centre line.
Making Left Turns from Two-Way onto One-Way Street

- Signal and, when safe, move into the lane next to the centre line in preparation for the turn.
- Slow down before entering the intersection, check for traffic ahead and to the right and, when safe, begin the turn.
- Turn from the lane next to the centre line into the lane nearest the left curb unless it is blocked within 30 m of the intersection.
Making Left Turns onto Driveways and Lanes
To make a left turn onto a driveway or back lane, signal and move into the proper lane before turning left.

U-Turns
Although under certain situations it is legal to make a U-turn, we advise against it unless it is at an intersection controlled by a U-turn traffic signal. Instead, in cities, you should go around the block to change directions. In rural areas, continue ahead until you can turn onto a side road from which you can then make a regular turn onto the highway in the desired direction. With the higher speeds prevailing on highways, it is extremely dangerous to make a U-turn.

U-turns are prohibited at:
• curves;
• approaches to or near the crest of a hill where there is not at least a 150 m clear view of oncoming traffic; and
• places where a sign prohibits U-turns.
**Roundabouts**

When approaching a roundabout you will see this roundabout sign.

Reduce your speed to the posted speed limit or slower and be prepared to yield to pedestrians/cyclists and vehicles in the roundabout. When no traffic is approaching from the left you may proceed into the roundabout. When on the roundabout you have the right-of-way over vehicles entering, continue until you reach the street you wish to exit. Signal your intentions to exit before you reach the street you wish to exit onto. As you exit, watch for pedestrians within the pedestrian corridor and yield the right-of-way to pedestrians/cyclists.
3. Driving Responsibly

Speed
A safe speed allows you to stop safely in emergency situations. Unless otherwise posted, the maximum speed limit is 90 km/h in rural areas and 50 km/h in urban areas. Poor driving conditions will require you to drive more slowly.

Driving safely can also mean not driving too slowly. You should not drive at such a slow speed that you hold back or block the normal and reasonable flow of traffic. At no time should you exceed the posted maximum speed limit.

Following Safely
You are automatically at fault if your vehicle “rear-ends” another because you are responsible for maintaining a safe following distance — one which provides you with sufficient time to stop in an emergency.

Use a four-second following distance when following under ideal driving conditions — allow more time under adverse conditions.

1. The rear of the truck ahead has just passed the sign you have decided to use as your marker. Begin counting.

2. Count: One thousand and one, one thousand and two, one thousand and three.

3. Count: One thousand and four (four seconds). If it takes less than four seconds for the front of your vehicle to reach the marker, you are too close. Four seconds is correct. The safety factor is even greater if it takes more than four seconds.

If you are being followed too closely, slow down gradually to give the driver time to react and avoid being struck from behind.
Passing

Care must be taken when passing because it is extremely difficult to judge the speed of approaching vehicles. You might think you have plenty of time and distance to pass, but don’t forget you are closing the gap between you and the approaching vehicle at twice your own rate of speed — and sometimes by more than that.

On highways, beware of vehicles parked on the opposite side, as they may suddenly pull out onto the highway. It is illegal to exceed the speed limit when passing.

The basic steps for passing are:

1. Check ahead for oncoming vehicles.
2. Check your side and rearview mirrors for vehicles approaching from behind.
4. Check the blind spot on your left for vehicles beside you.
5. Check again that the road is clear before passing.

Once the vehicle you have passed is visible in your rearview mirror, check your blind spot on the right, signal to the right, and return to the proper lane.

When being passed, slow down and move as close as possible to the right side of the road.

Drivers must be aware of wind turbulence caused by passing semi-trailer trucks or other large motor vehicles.

You must never pass:

• By driving off the road (e.g., on the shoulder).
• Where a vehicle is slowing or has stopped to yield the right-of-way to a pedestrian or other vehicle.
• In a school area within 15 minutes of the opening or closing of morning and afternoon classes, or while children are near a school or playground.
• On the left side of the road if it is not sufficiently clear ahead.
• Where highway construction is taking place.

Passing on the right is permitted only:

• When overtaking a vehicle making a left turn;
• On one-way streets; or
• On streets with marked lanes.
No-Zone Around Large Vehicles

Big trucks have big blindspots — and to stay safe, you should avoid them. The No-Zone refers to blindspot areas around big trucks, where collisions are more likely to occur.

**Rear**
Trucks have deep rear blindspots. A truck driver can’t see you if you’re in this No-Zone — especially if you’re tailgating. If you can’t see the truck mirrors, the driver can’t see you. Stay well back of big trucks to avoid a rear-end collision.

**Side**
Trucks have large blindspots on both sides. If you stay in these blindspots, that can mean trouble if the truck driver decides to change lanes.

**Front**
Truck drivers sit up high, and the hood of the cab obscures part of the road ahead. When you pass a big truck, make sure you can see the entire truck cab in your rear-view mirror before pulling in front. When cars cut in too soon, then abruptly slow down, truck drivers are forced to react with little time or room to spare.

**Backing**
Never pass close behind a truck that is preparing to back up or is in the process of backing up. Most trailers are 2½ m wide, and completely hide objects behind them.

**Wide Turns**
Truck drivers must sometimes swing wide to the left in order to make a right turn. They can’t see cars directly behind or beside them. If you cut in between the truck and the right curb, you might cause a collision.
Entering and Leaving an Expressway

Entering

Rear-end collisions are the leading type of accidents at entrances to expressways. Not only do you face the possibility of being rear-ended by traffic behind you in the entrance lane or on the expressway, you might rear-end a vehicle while your attention is focused on traffic in the expressway. The following advice will help minimize the risk of rear-end collisions:

1. As you enter the entrance lane, adjust your speed to match traffic and keep plenty of space between you and the vehicle ahead, so that you and the vehicle behind you will have more time and distance to stop in an emergency.

2. Check expressway traffic to determine if it will be necessary for you to slow down or stop at the point immediately before the entrance of the merge lane. (See illustration.) Keep in mind that the decision could be made for you by the driver immediately ahead of you.

   If you’re not entirely sure if you’ll have to slow down or stop, touch your brakes lightly to alert drivers behind that you may have to do so. The place to stop is just before the entrance of the merge lane.

3. Use the merge lane to match your speed with expressway traffic, so as to merge without having to stop. If you stop at the end of the entrance lane, you sharply increase the risk of being struck from behind.
Leaving
1. Give yourself plenty of time to move over to the lane closest to the exit.
   (Follow the instructions given earlier for making lane changes.)
2. Maintain your speed until you are completely in the exit ramp, and then slow down smoothly to whatever speed is posted or to the prevailing speed in the exit ramp (whichever is slower).

*If you pass your exit on an expressway, never stop to back up. Continue on to the next exit.

Right-of-Way

Uncontrolled Intersections
When two vehicles approach an intersection with no traffic signals or signs, both must slow down. The vehicle on the left must always yield the right-of-way to the vehicle on the right. Nevertheless, the driver with the “right-of-way” must still exercise proper care and attention to avoid a collision.

Private Entrances to Public Thoroughfares
When entering a street, Provincial Road or Provincial Trunk Highway from a private road, lane, driveway or parking lot, you must stop before crossing the sidewalk and yield the right-of-way to all pedestrians and traffic. Proceed when safe.

Funeral Processions
Drivers of vehicles in a funeral procession with lighted headlights and following a lead car may, if traffic conditions and local bylaws permit, go through a red light or stop sign with caution. The drivers of all other vehicles must yield the right-of-way to the procession.

The lead car in the funeral procession may be equipped with a flashing amber light.
**Emergency Vehicles**

An emergency vehicle, when responding to an emergency call, will sound an alarm and use flashing lights. The alarm may be a horn, gong, bell or siren. The lights may consist of any of the following: a flashing red light, flashing red and blue lights or alternating flashing headlights.

When an emergency vehicle (ambulance, fire or police), sounding an alarm and flashing lights, is approaching from any direction you must yield right-of-way by:

- immediately moving clear of an intersection if you are stopped for a red light or stop sign. If blocking the path of an emergency vehicle, you must proceed through a red light or stop sign with caution, to clear the way;

- driving as closely as possible to the right curb or edge of roadway; and

- remaining stopped at the edge of the road until the emergency vehicles have passed.

**Note:** On one-way streets, pull right or left to the nearest curb so as not to block the emergency vehicle.

When passing a stopped emergency vehicle you must slow down and move safely as far away from the emergency vehicles and workers as possible. It’s the law!
**School Buses**
Whenever you approach a school bus with flashing lights or other warning device, whether you are approaching it from the front or rear, you must stop at least 5 m from the bus and remain stopped until the signal is turned off or the bus starts moving again.

A school bus with flashing amber lights means it is about to stop. You must prepare to stop.

You need not stop when approaching a school bus from the opposite direction of a divided highway, providing there is a physical separation such as a median between the two roads. However, you must slow down and watch out for children. **A double solid line is not a physical separation.**

You must stop your vehicle not less than 5 m from the bus when approaching from either direction.
Transit Buses

The largest number of accidents involving transit buses result from vehicles rear-ending the bus, either in the bus stop location, or at intersections. Be aware of their travel and maintain a safe following/stopping distance.

Buses do not necessarily stop at all bus stops. Some stops are designated to special routes such as express and sporting events. If a stop is coming up, do not assume the bus is going to stop.

Transit buses display a decal on the rear of the buses requesting motorists to “Please Yield”. A bus operating on the street will be moving around parked vehicles or out of bus bays. If a transit bus is signaling its intention to change lanes to the left, a motorist can increase the safety of this manoeuvre by allowing sufficient time and space for the bus to enter the lane. At times, a bus may be required to change multiple lanes in order to move from a right hand curb lane to a left hand turn storage lane.

Buses are wider than most cars and light trucks, and consequently, they occupy more roadway space. Buses operate on a wide variety of street types, including residential streets and busy downtown streets. When exiting a parked vehicle, shoulder check before opening your door to avoid contacting a passing bus or other large vehicle.
Transit Bus Situation #1
When making a right turn, it must be done in the extreme right lane. Making a right turn from the second lane in front of a transit bus not only places you at risk of being struck if the bus pulls away, but is also illegal. Pull behind and wait until the bus completes loading, unloading and pulls away from the stop or intersection.

If the bus has its hazard lights activated and is sitting a short distance from the intersection, communicate your intentions by signaling and tapping your horn prior to pulling around the front of the bus.
Transit Bus Situation #2
There are numerous locations where the stop line of an intersection is set back farther than normal from the crosswalk. This is to accommodate large vehicles such as trucks and transit buses being able to physically negotiate the turn.
Transit Bus Situation #3
At many times, there may be passengers standing on transit buses.

A last second manoeuvre in front of a bus such as a lane change, or pulling out in front, may cause the bus to stop or brake suddenly causing passengers on board the bus to fall down and possibly be injured.

Please drive cautiously around transit buses and be aware that they carry standing passengers.

Transit Bus Situation #4
The blind spot of a 12.2 m transit bus is 4.3 m on the right side and 1.5 m on the left, as well as 12.2 m to the rear.

If you are driving in this area, the bus operator may not see you.
**Transit Bus Situation #5**
Transit buses are given special turning privileges at certain identified intersections. Be aware of these locations and watch for buses turning with you.
**Railway Crossings**

The signs below indicate a railway crossing ahead. Slow down, check to the right and left along the angle of the track shown in the sign, and proceed only when safe.

The actual crossing is marked by a railway crossing sign.

When approaching railway crossings, check both ways for trains and remember that they always have the right-of-way.

When stopping at a crossing, keep at least 5 m away from the nearest rail in a restricted speed area and at least 15 m away in a non-restricted speed area. (A restricted speed area means any area within a city, town or village. It also includes any municipality or part of a municipality or any highway or portion of a highway designated by *The Highway Traffic Board*.)

If you see a train approaching, be prepared to stop. Most motorists seriously misjudge the speed of trains, commonly believing they’re travelling much slower than they actually are or incorrectly assuming that trains must slow down at railway crossings.

Since most railway crossings do not have electronic signals warning you when to stop, the most important rule to recognize is that trains automatically have the right-of-way at all railway crossings. In other words, **at railway crossings, the safety of you and your passengers depends entirely on you, the driver**.

Other safety pointers include:

- **When there is more than one set of tracks, don’t start across when the train passes. Make sure there isn’t another train coming on the other track.**
- **Half of all night rail/highway crossing accidents involve vehicles hitting trains. To avoid that, slow down when you see the advance warning sign so that you can stop in time if you have to.**
- **Never move onto the track unless you’re sure there is plenty of room on the other side. If traffic is backed up so that you can’t get across the tracks, stop and wait at least 5 m from the crossing, until the traffic jam clears and it is safe to cross.**
- **Some vehicles may stop at all crossings. These may include regular buses, school buses and vehicles carrying hazardous materials. If you’re following such a vehicle, be prepared to stop.**
It is illegal to:

1. Cross a railway crossing when warning signals are on (except as explained below).

2. Shift gears when crossing railway tracks.

3. Drive a vehicle through, around or under a crossing gate or barrier that is closed or being opened or closed.

4. Drive a vehicle onto a railway crossing unless there is sufficient space at the other side of the crossing to accommodate your vehicle without obstructing the passage of trains.

5. Park within 30 m of the nearest rail of a railway crossing unless otherwise posted.

Drivers may cross a railway crossing when the warning lights are flashing if:

- the vehicle is brought to a complete stop;

- the crossing is not protected by gates or barriers;

- the crossing is within a restricted speed area;

- the train is stopped or is a safe distance away; and

- the crossing may be done safely.

For railway crossing procedures, drivers of for-hire vehicles, school buses and vehicles capable of transporting flammable liquid or gas should consult the Professional Driver's Handbook.

If there is any doubt, stop and wait for the train to cross or the warning lights to stop flashing.
4. Pedestrian Safety

Crosswalks
Pedestrians have the right-of-way at both marked and unmarked crosswalks.

Unmarked Crosswalks — These are extensions of sidewalks across a road at an intersection. No markings or signs are required. However, precaution should be taken at all times.

Marked Crosswalks — These include crosswalks at intersections controlled by traffic lights, school crosswalks and pedestrian crosswalks.

As a Driver
You must stop and yield the right-of-way to pedestrians who are about to cross, unless they are on the opposite side of a divided highway separated by a median. A double solid line is not a physical separation.

• It is illegal to pass traffic ahead of you that is slowing down or stopped for pedestrians.
• Proceed only when the pedestrians have safely crossed the street or have safely reached the median of a divided roadway.
• No parking or stopping is allowed within 3 m of a crosswalk.
• All pedestrians have the right to use school crosswalks.

Crosswalk Signs

School Crosswalk Sign

Pedestrian Crosswalk Sign
As a Pedestrian

The Walking Figure
This indication permits you to **leave the curb** and enter the roadway. For reasons of efficiency, this indication is only displayed for a relatively short period of time.

The Orange Hand
This indication immediately follows the Walking Figure indication. The Orange Hand provides sufficient time for those pedestrians **already in the roadway** (pedestrian clearance interval) to complete their crossing. At certain intersections the orange hand may flash during the interval provided for pedestrians to complete their crossing and clear the roadway. Pedestrians facing the Orange Hand indication must not begin to cross the roadway, as there may not be sufficient time to do so safely.

When pedestrians are in a crosswalk facing either the Walking Figure or the Orange Hand indication, they have the right-of-way over all vehicles. However, if the vehicle operator does not yield the right-of-way, the pedestrian will come off second best in any resulting collision. Regardless of the pedestrian signal displayed, the safest practice is for the pedestrian to be sure that all approaching vehicles are stopped before proceeding into or across the roadway. In particular, even if cross-street traffic is stopped, pedestrians should check for turning vehicles.

The length of the pedestrian clearance interval is based upon average walking speed. Consequently, pedestrians must cross the roadway as quickly as possible.

Pedestrian Push Buttons
At many intersections controlled by traffic signal lights, pedestrian activity is intermittent. For reasons of intersection operating efficiency, the Walking Figure indication will not be displayed automatically during each signal cycle. To ensure that the Walking Figure indication is displayed and to provide sufficient clearance time to cross the entire roadway, the pedestrian must activate the correct push button. Signs with arrows pointing in the direction of the crosswalk are provided to indicate which push button is associated with each crosswalk.
Pedestrian Safety Tips
The pedestrian signals give you certain rights while you are in an intersection. However, they will not protect you from careless motorists. It is therefore important to be cautious when crossing busy intersections and to follow these safety tips:

• Do not leave the curb unless you are sure that approaching vehicles on the cross street have stopped or will stop.
• Cross the street as quickly as possible.
• Always watch for turning vehicles.
• Do not leave the curb when the Walking Figure is not displayed.
• Always activate the pedestrian push button if there is one present.
• Do not cross at places where a pedestrian prohibited sign is posted.

Pedestrian Corridors
These feature large, illuminated overhead signs, with alternating flashing amber lights on top. Large rectangular bars are painted on the crossing.

As a Driver
• It is illegal to pass traffic ahead of you that is slowing down or has stopped for pedestrians.
• Make sure the pedestrians have safely crossed the street or have safely reached the median of a divided roadway before proceeding.
• No parking or stopping is allowed within 15 m of a pedestrian corridor.
It is illegal to pass traffic that has slowed down or stopped for a pedestrian.

**As a Pedestrian**

- You should signal your intention to cross a pedestrian corridor by pushing the control button to activate the warning lights (if available) and also by extending your arm forward. Do not begin to cross unless traffic has stopped or is a safe distance away.

**Blind Persons**

Whenever you see a blind person near a roadway, drive carefully and be prepared to stop. Often, a blind or partially blind person will raise their cane when uncertain of crossing the street safely. That is your signal to **stop** and give them the right-of-way. Learn to recognize a guide dog by its special harness which allows the person to hold on firmly. Don’t startle the animal by racing your engine or honking your horn.

If you drive a hybrid vehicle there may be no sound from your engine to let a blind person know that you are nearby. Exercise extreme caution in this situation.
School and Playground Areas

You must drive slowly and be prepared to stop suddenly when a child is on or near a road, or close to a school or playground. It is illegal to pass another moving vehicle in a school area, within 15 minutes of either the opening or closing of classes or at any time when children are on the school grounds or near the road.

Watch for school safety patrols because they indicate that children are nearby. The patrols are easily recognized by their blaze orange vests. They play an extremely important role in directing children across streets.
5. Cyclist Safety

As a driver you should:

- Take extra caution as some cyclists may not know or follow all the traffic safety rules.
- Recognize that every person operating a bicycle upon a highway (roadway) has the same rights and duties as a driver of a motor vehicle, motorcycle or moped.
- Never turn right without checking for cyclists coming up close to the right curb. They could hit your vehicle if you turn in front of them.
- Never turn left in front of a cyclist unless you have plenty of time and distance to do so safely.
- Always allow plenty of room between your vehicle and the bicycle before passing a cyclist.
- Be careful when opening your doors, since cyclists often ride close to parked cars.
- Always dim your lights when approaching an oncoming cyclist. At night you can’t depend on cyclists to have lights and reflectors, so be prepared at all times.

As a cyclist you should:

- Operate a bicycle as close as practicable to the right-hand edge or curb of a highway (roadway), usually one-half to one metre away from the curb.
- Travel in single file.
- Wear a certified helmet.
Cyclist Signals

Remember: Many children fail to signal, so always be extra cautious when approaching young cyclists. Their lives are in your hands.

Starting

Stopping

or

Turning Left

Turning Right
6. Backing Up
Before backing up, check for anyone or anything behind you, particularly children who may be too small to be in your direct line of vision. With your foot on the brake, put the vehicle in reverse. If you are reversing straight back or to the right, look over your right shoulder; if reversing to the left, look over your left shoulder. Take your foot off the brake and, if you’re turning as you reverse, ensure that you don’t strike anything to the sides.

Three Point Turn
Traffic Check
Before slowing down check traffic in front and behind you. Check your blind spot before pulling over to the right side of the road to stop.

Signal
Turn on your right signal before slowing down unless there are vehicles waiting to enter the road from side roads or driveways between you and your stopping point. (Position 1 — see diagram on next page.) Wait until you have passed these entrances so that drivers will not think you are turning.
**Speed**
Gradually reduce speed. In a vehicle with a manual transmission, you may down shift into a lower gear as you slow down. Do not coast with your foot on the clutch pedal.

**Position**
Stop so you are parallel to the curb and not more than 45 cm away. **(Position 2)** Where there is no curb stop as far as possible off the travelled part of the road. Do not stop where you will block an entrance, an intersection or other traffic.

**Traffic Check**
Check your mirrors and shoulder check to the right before starting the turn. Wait until the way is clear. Each time you stop while turning, check traffic in both directions.

**Signal**
Turn your right signal or four-way flasher on.

**Turn Around**
With the steering wheel turned sharply right, reverse your vehicle slowly and smoothly, backing into the lane or driveway. **(Position 3)** Back up far enough so you can have a clear view of the roadway and are behind the sidewalk and stop. Turn your left signal on shifting to a forward gear, turn your steering wheel to the left and make sure that you check in both directions, then move your vehicle into the traffic lane. **(Position 4)**

**Speed**
Return to normal traffic speed by accelerating smoothly to blend with the traffic around you. In light traffic accelerate moderately. In heavier traffic you may have to accelerate more quickly. In a vehicle with a manual transmission shift gears as you increase your speed.
Three Point Turn Around on a Dead End Street

Traffic Check
Before slowing down, check traffic in front and behind you. Check your blind spot before pulling over to the right side of the road to stop.

Signal
Turn on your right signal before slowing down.

Speed
Gradually reduce speed. In a vehicle with a manual transmission, you may down shift into a lower gear as you slow down. Do not coast with your foot on the clutch pedal.

Position
Stop so you are parallel to the curb and not more than 45 cm away. Where there is no curb, stop as far as possible off the travelled part of the road. Do not stop where you will block an entrance, an intersection or other traffic. (Position 1)

Traffic Check
Check your mirrors and shoulder check to the left just before starting the turn. Wait until the way is clear. Each time you stop while turning, check traffic in both directions.

Signal
Turn on your left signal before starting to turn.

Turn Around
With the steering wheel turned sharply left, move slowly and smoothly across the road. When you have reached the far left side of the road, stop and put your vehicle in reverse. With the steering wheel turned sharply right, move in reverse so the vehicle is facing in the new direction. (Position 2) Stop and shift into forward gear to drive ahead. Use the whole road to make your turn, reversing only once. Do not reverse over the edge or shoulder of the road or onto the curb. (Position 3)

Speed
Return to normal traffic speed by accelerating smoothly to blend with the traffic around you. In light traffic accelerate moderately. In heavier traffic you may have to accelerate more quickly. In a vehicle with a manual transmission, shift gears as you increase your speed.
7. Parking

Parallel Parking

1. Check your mirrors for traffic. Don’t stop suddenly if a car is close behind you. Signal your stop by flashing your brake lights approximately three times or by using a hand signal and then turn on your right signal. Drive alongside Car B about one metre away. Stop when your car’s (Car A) rear bumper is even with the rear bumper of Car B.

2. When you have checked your mirrors and blind spots and you are sure the way is clear, start backing into the space very slowly. As you reverse, you should steer sharply to the right until your car is at a 45 degree angle from the curb. Watch for vehicles passing you. Stop when your steering wheel is in line with the rear bumper of Car B.

3. Straighten the wheels and continue to back into the space, the turn signal can be turned off. Stop when the right end of your front bumper is in line with, and past, the rear bumper of Car B.
4. Turn the steering wheel sharply to the left as you continue to back slowly. Make sure the front of your vehicle does not hit the parked vehicle ahead. Your right rear wheel should be close to the curb. Stop the car.

5. Put the car into forward gear. Turning the steering wheel to the right as you do so, drive slowly forward. This should bring your car parallel to and not more than 45 cm away from the curb. Stop the car when it is centred between Cars B and C.
**Backing Skill Test**

During the road test, applicants will be required to demonstrate their ability to back up their vehicle. This will be done by successfully backing a vehicle within a space measuring approximately 1.85 m by 7.5 m as outlined by testing poles.

During the road test applicants will be asked to stop before the backing area to be given an explanation of the test. You will have three attempts to complete this portion of the test, each attempt consists of three movements of the vehicle (backwards, forward and then backward again). At this point the vehicle must be parked satisfactorily. The vehicle cannot touch any of the poles, drive over the curb, the tires can touch the curb, but not drive over it, drive between the poles representing the front or the back of a vehicle, or commit a dangerous act such as backing up or moving forward while a car is passing close by. If any of these situations happen, it is considered an automatic failure of the road test.
**Angle Parking**

This type is commonly used in parking lots, shopping centres and, in some communities, on very wide streets.

**Steps in Angle Parking**

1. Signal your intention to park and slow down.
2. Check for approaching traffic from the front and rear.
3. Approach the stall approximately a car width from the parked cars.
4. When your car’s front end is even with the rear of the stall you want to park in, begin steering sharply to the right while slowly driving towards the centre of the stall. Remember as you are turning into the stall, to check that you will not hit the vehicle on either side of the stall.
5. Once your car is centred in the stall, straighten your wheels and continue driving forward until you are completely in the parking stall.

Although it is easy to park, backing out from this position can be hazardous. Shoulder check sides and rear — don’t just rely on your rearview mirror. Make sure it is clear behind and on both sides before backing up. If your vision is blocked, for example, by a truck parked beside you, move back cautiously and watch for a pedestrian or vehicle that you may not have seen.
Parking on a Hill or Incline

Vehicles with automatic transmission should be placed in the “Park” position. Vehicles with manual transmission should be placed in reverse or low gear. In both cases, always set your parking brake firmly.

**Uphill parking** — turn the wheels **away from the curb**.

**Downhill parking** — turn the wheels **toward the curb** so the position of the wheel will help hold the car.

If there is no curb, whether you are parking up or downhill, turn wheels slightly to the right so that if the car begins rolling, it will move off the roadway.
Parking Pointers
• Always look for traffic before opening a vehicle door.

• By law you may leave your vehicle unattended when the motor is running only for reasons such as warming the vehicle and defrosting the windshield. It is recommended that you have a spare key and you lock your door if you leave the vehicle. Utility and delivery service vehicles are exempt from this law.

• When leaving from a parked position, signal, and wait until it is safe before pulling out.

Illegal Parking
It is illegal to park:
• on a sidewalk;

• across the entrance to any driveway, back lane or intersection;

• within 3 m from the point on the curb or edge of the roadway immediately opposite a fire hydrant;

• on a crosswalk or within 3 m of a crosswalk;

• within 15 m of a pedestrian corridor;

• within 9 m of a stop sign or other traffic sign or signal posted at an intersection;

• within 30 m of the nearest rail of a railway crossing, unless otherwise posted;

• within 6 m of a driveway entrance to a fire station, unless otherwise posted;

• on a roadway beside another vehicle that is already parked;

• at a curve on the highway outside a city, town or village, when the vehicle cannot be clearly seen from at least 60 m in each direction upon the highway; or

• in such a manner that it becomes a hazard or that is contrary to any section of The Highway Traffic Act or any municipal bylaw.
8. Vehicle Equipment

As a driver, you are responsible for ensuring that your vehicle is safe to drive. Vehicles should be thoroughly checked at least twice a year. A police officer can order you to have defective equipment repaired immediately. If you fail to comply, your vehicle registration may be suspended until a qualified mechanic certifies the defects have been repaired.

Is your vehicle safe to drive? Check:

Circle Check — Exterior of Vehicle

Windshield wiper, washer and defrost systems
Head lights Parking lights Hazard lights Turn signals
Secondary hold latch for forward opening hood
Check licence plates
Look under vehicle for fluid leaks
Door handles
Turn signals

Required Equipment

The following equipment must be in safe working condition:

Brakes

Brakes must be able to stop passenger vehicles travelling at 30 km/h within 7.6 m. Other motor vehicles, such as trucks and vans under 4,540 kg, must be able to stop within 9 m. All brakes should be periodically checked and, if necessary, adjusted.
Lights
All motor vehicles, except motorcycles, must have:

- From two to four headlights, including a high beam and low beam on each side, in good working order. Vehicles must also have a high-beam indicator light. When operating your vehicle, headlights must be switched on ¼ hour before sunset until ¼ hour after sunrise and when visibility is reduced to 60 m. A recommended safe driving practice is to drive with headlights on all the time.

- Every motor vehicle (except motorcycles and mopeds) manufactured on or after December 1, 1989, must be equipped with functional daytime running lights. For motorcycles and mopeds, model year 1975 or later, a headlamp must be on at all times when being operated.

- Turn signals — amber or white lights at the front, red or amber lights at the rear. Motorcycles of the model or make of the year 1974 or earlier and mopeds are not required to be equipped with signal lights. Trailers require signal lights on the rear only.

- At least two rear red lights or, for vehicles dated 1967 or earlier, at least one rear red light.

- Passenger cars manufactured after 1986 must be equipped with one functional centre high-mounted stop light, in addition to the regular stop lights.

- One white light for the rear number plate.

- If a trailer is attached, at least one red light on the rear plus a stop light. Towed vehicles whose width exceeds 2.05 m (except passenger cars) must have clearance lights and reflectors at the front and rear.

- All vehicles that have a load extending 1 m or more past the rear of the vehicle must have a red flag clearly visible at the end of the load during daylight, and a red light or reflector at the end of the load at night.

Tires
To maximize the safety and life of your tires:

- Use tires of the same construction and size. Your owner’s manual should inform you which is best for your vehicle.

- Using an accurate tire pressure gauge, check the air pressure of your tires at least twice a month and after long trips. The best time to inflate tires is when they are cool.
• Check your owner’s manual to determine if and when you should rotate tires.
• Always replace tires when the tread is less than 1.6 mm. After replacing tires, have the wheels balanced.
• Studded tires are illegal between April 30 and October 1.

**Remember:** a tire with deep cuts, cracks, blisters or bulges is dangerous and should be replaced.

![Tire Wear Diagram]

1) **Normal Wear**
   - exposes the wear indicators between two or more adjacent grooves. Replace the tire when the wear indicators become visible.

2) **Under-Inflation**
   - will cause a tire to wear out at the edges first. This tire’s smooth edges may cause skids on wet curves and must be replaced.

3) **Over-Inflation**
   - causes the tire to wear out in the centre first. This tire is dangerously worn and must be replaced.

**Mirrors**
All motor vehicles must be equipped with a mirror, providing a clear rear view. Vehicles such as vans, buses, trucks, campers, cars pulling trailers and other vehicles must have outside mirrors on the right and left sides. Extended mirrors must be removed when a trailer is not being towed.

**Horn**
All motor vehicles must have a horn that can be heard for at least 60 m. A horn should be sounded only when necessary.

**Windshield and Windows**
There must be a clear view from the front windshield, side and rear windows. From **November 1 to March 31** inclusive, your vehicle must be equipped with frost shields, unless it is equipped with a device capable of keeping the windshield, the rear window and the windows at both sides free from frost.
Windshield Wipers and Washers
Front windows must have windshield wipers in good working condition and every motor vehicle dating from 1971 (except motorcycles or mopeds) must have a functioning windshield washer with the fluid container topped up as necessary.

Speedometer and Odometer
A motor vehicle must have a speedometer and odometer in good working order. It is illegal to alter the distance shown on an odometer.

Muffler
All motor vehicles must have a muffler capable of preventing excessive noise. A leaky muffler can cause carbon monoxide poisoning. It is illegal to use a muffler cut-out, straight exhaust, gutted muffler, hollywood muffler, bypass or any device that reduces the effectiveness of a noise muffler.

Bumper
Every passenger car must have a bumper at the front and rear.

Suspension
It is illegal to raise or lower the original suspension of a passenger car.

Other Equipment
Oil Pressure Gauge
This gauge shows if there is sufficient oil pressure to motor parts where it is needed.

Temperature Gauge
This gauge shows the temperature of the engine. Do not continue to operate the vehicle if this gauge shows a high temperature.

Ammeter/Voltmeter
This gauge shows when the battery is being charged or discharged.

Fuel Gauge
This gauge identifies the amount of fuel left in the fuel tank.

Warning Light
Most vehicles are equipped with warning lights to notify the driver of problems with certain operating systems on the vehicle. If a light is illuminated consult your vehicle operating manual.

Air Bags
Air bags are built into steering wheels, dashboards and in the sides of some vehicles. They “launch automatically” when there is a very fast deceleration such as a crash. They give drivers and passengers extra protection, especially during head on and side impact crashes.
9. Poor Driving Conditions
You are responsible for keeping full control of your vehicle at all times, even under poor driving conditions.

**Ice, Sleet or Snow**
- Start out slowly and gently test steering and braking conditions.
- Reduce your speed to suit ice and snow conditions, and remember that even snow tires can slide on ice or packed snow.
- If your vehicle does not have anti-lock brakes, apply steady brake pressure without locking the wheels and losing steering control. (This is sometimes referred to as threshold braking.) If your vehicle does have anti-lock brakes, apply full brake pressure and hold. You will still have some steering control. Check your owner’s manual for the best advice to follow for your specific braking system.
- Increase the distance from the vehicle ahead of you according to road conditions. Remember that in winter your vehicle requires a greater stopping distance.
- Be alert to slippery patches, pedestrians, bridges (which may have slippery surfaces), blind intersections, snow plows, graders, etc.
- Keep windows and windshields clear of ice and snow, and make sure your defroster and windshield wipers are working properly.
- Keep your lights on.

**Daytime Use of Headlights**
Using headlights during the day can significantly reduce the chances of an accident because your vehicle is easier to see.

**Reduced Visibility**
By law, while driving a vehicle, you are required to switch on headlights ½ hour before sunset until ½ hour after sunrise and when visibility is reduced to 60 m.

Other recommended practices include:
- Sharply reduce your normal driving speed.
- Turn your headlights on low beam to reduce the glaring reflection from dense fog or snow. Fog lamps are even better.
- Reduce your speed further on seeing headlights or taillights. The headlights may be on a vehicle being driven down the centre of the road, and the taillights may be a vehicle stopped on the road or just barely moving.
• If driving at a greatly reduced speed, turn your hazard/emergency flashing lights on. This will make you more visible and warn other drivers that you are travelling at a reduced rate of speed.

• Be prepared for emergency stops. If the visibility becomes so poor that you can barely see, cautiously pull off the pavement and stop. Wait until visibility improves.

**Night Driving**

One of the major reasons why driving at night is more dangerous than driving during the day is that you cannot see as far. Never drive so fast that you can’t stop within the distance you can see ahead with your lights. That means driving slower than usual, since under normal conditions you can see only 30 m ahead on low beam and 110 m ahead on high beam.

**To reduce glare,** do not look directly at the headlights of oncoming traffic; instead, look to the right edge of the roadway. To cut glare from the rear, adjust your mirror or use a day-night mirror.

Reduce your speed until your eyes have recovered from the glare.

Some additional pointers to minimize the hazards of night driving are:

• Check your lights regularly so the low beams reveal objects at least 30 m ahead without blinding oncoming drivers.

• Dim your lights at least 450 m from oncoming vehicles, and 60 m when following vehicles.

• Keep headlights clean.

• Keep the interior lights off so that your eyes will remain adapted to the dark.

• Watch for pedestrians and vehicles stopped at the edge of the road.

• If you must stop, pull off onto the shoulder and use your emergency flashing lights or other approved warning devices such as flares.

• Watch for highway signs — they’re more difficult to see and read at night.

• Keep both the inside and outside of the windshield clean.

![Daytime Night – Low Beams Night – High Beams](image)
Drowsiness or Fatigue
Being drowsy or “half asleep” can be compared to a drugged condition which can result in a fatal collision. It usually occurs from steady driving or from having started out tired. Be well rested before you begin your trip. If you begin to feel sleepy, stop your vehicle and rest. If you must park by the side of the road, pull well over and put on your four-way flasher to prevent being struck. If possible, stop at a rest area, a motel or a hotel.

Distractions
Distractions can be dangerous because they reduce your ability to respond as quickly as you should to emergencies. For example, studies show that there is a direct connection between cell phones and dangerous driving. Drivers who talk or text on a cell phone while they’re behind the wheel significantly increase their crash risk.

That’s why Manitoba is making it illegal for drivers to use hand-held cell phones when they are behind the wheel of a vehicle. This law will come into force in 2010.
**Gravel Road Driving**

Gravel roads present special driving challenges as evidenced by the number of rollover accidents. Some safety tips to minimize the safety hazards when operating a vehicle on gravel roads are:

- When driving onto a gravel surface, **slow down** and drive carefully;
- As a driver you should always drive at a speed that will allow you to stop safely for any hazard;
- On gravel, sudden changes in direction such as a swerve to avoid an object or animal on the road, can be dangerous;
- Stopping or speeding up too quickly can result in loss of control;
- If your vehicle does not have anti-lock brakes, apply steady brake pressure without locking the wheels and losing steering control. (This is sometimes referred to as threshold braking). If your vehicle does have anti-lock brakes you should be able to apply full brake pressure and still have steering control. (Know your braking system — see Owner’s Manual.);
- Remember that stopping distances are increased because your tires have reduced traction to the road surface (loose gravel surface);
- Following distance is **very important.** You should stay a minimum of six (6) seconds behind other vehicles. This distance should be increased when road conditions are less than perfect (washboard, potholes and loose gravel). This will reduce the danger from clouds of dust obscuring vision, flying rocks damaging head lights and windshields;
- Rollovers are of particular concern in rural driving, whether on gravel or pavement. It is very easy for a distracted driver to allow the tires on one side of the car to wander off the road while travelling at higher speeds. Many drivers will try to get back on track by quickly turning the steering wheel and jamming on the brakes. This can cause the car to start into a skid, where it may tip and rollover several times before stopping;
- To avoid a rollover take your foot off the gas and steer the car so it follows the edge of the roadway, slowly turn the steering wheel to gradually guide the vehicle back onto the road.
Winter Road Driving

The winter road systems in Manitoba are basic access routes to remote northern communities and have no alignment standards. There are no posted speed limit signs and the recommended speed limit for vehicles with a maximum G.V.W. of 7 tonnes or greater is 15 km/h on all ice roads. Winter roads are constructed on the natural terrain of the land and ice. They cross muskeg, rock ridges, streams, rivers and lakes. The road surface can get worse quickly due to changes in the weather. The chance of an accident increases if you do not drive according to the road conditions.

- Travel is not approved until a section officially opens. No regular inspection of maintenance is provided along the route before opening or after closing, increasing the potential risk to drivers.
- The road surface is packed snow or ice and the stopping distance of all vehicles is longer than on land roads. As a driver, you should be travelling at a speed that will allow you to safely slow down or stop if you come upon a hazard or approaching vehicle.
- Winter roads are primarily used by heavy truck traffic delivering fuel, freight, groceries, machinery and building products. The contractor’s maintenance equipment is slow moving and could be met on blind corners. The season may be shortened due to weather conditions and the traffic volumes may increase. Night travel is recommended for better visibility of traffic.
- Ice road failures, sudden storms, ground drifting and whiteout conditions preventing travel can occur in subzero temperatures. Wilderness survival training and ice road driving courses are recommended.
- Passing or meeting other vehicles should be done with great care because swirling snow can reduce visibility.
- The results of an unexpected delay, breakdown or accident when travelling in an isolated area can be life threatening if you are not prepared. It may take a long time for help to arrive if there is trouble. Proper clothing, personal medication, fuel to reach your destination, vehicle and survival equipment, phone and CB communication are recommended for every vehicle travelling on the winter road system.
- Prior to starting your trip you should tell a person at your destination when you expect to arrive.
- Environmental Guidelines require road users to be responsible for their own abandoned vehicle and garbage removal.
**Hills**

Slow down at the top of a hill to make up for the increased braking distance required on the downslope. Before starting down a steep hill, shift to a lower gear to let your engine assist you as a braking force. Never coast down hills in neutral or with the clutch disengaged because you’ll be relying too much on your brakes and they may not hold.

Don’t pass near the crest of a hill because your sight distance ends at the hilltop.

It may be irritating to follow slow-moving vehicles up a hill, but because your sight distance is limited, you should remain patient and follow all the way over the crest before passing. Observe the pavement markings and road signs.
Farm Equipment on Roads

When outside of cities, drivers need to be watching for farm equipment that might be moving between fields. Many farm implements are very large, and oddly shaped, and farm tractors, combines and other equipment move very slowly, with a maximum speed of 40 km/h. Drivers need to be aware that at highway speeds, you will approach a piece of farm equipment faster than expected. As well, farm implements can sometimes take up more than half of the road width, or if they are crossing a bridge, can take up the full width of the bridge. The most important thing to remember when approaching farm equipment on the road is to slow down well ahead of time, and to look closely at the implement when passing or meeting it to make sure you know how wide and how long it is.

Remember a valid Class 5 Intermediate Stage licence or higher is required to operate heavy and agricultural equipment on provincial highways and roads in urban areas. These types of vehicles include tractors, self-propelled farm equipment such as combines, and heavy equipment such as front-end loaders, cranes, forklifts and graders. Provincial highways and urban roads do not include rural municipal roads, service roads or winter roads controlled or maintained by a local government such as a rural municipality.
Pilot Vehicles

Pilot vehicles are used to warn drivers they are approaching an oversize vehicle or load.

When an oversize or overload permit requires a pilot vehicle for escort purposes, the pilot vehicle shall be equipped with a yellow flashing light and shall display an illuminated “WIDE LOAD” or “D” sign.

When escorting an oversize vehicle or load:

• On a two-lane or four-lane highway, a pilot vehicle shall precede and follow the oversize vehicle or load at a distance of not less than 100 m and not more than 500 m; and
• On a four-lane divided highway, the pilot vehicle shall follow the oversize vehicle or load at a distance of not less than 100 m and not more than 500 m.

Drivers should be aware that the oversize vehicle or load may pose a threat to normal traffic patterns, particularly when passing the oversize vehicle or load on a two-way highway.
10. Driving Emergencies

Running Off the Pavement
If your vehicle goes onto the shoulder of the road:
• Stay on the shoulder and steer in a straight line.
• Take your foot off the accelerator.
• Apply the brakes very gently.
• After slowing down, and if traffic permits, ease back onto the pavement, being careful not to overshoot the centre line.

Blowouts
A front-tire blowout tends to cause the vehicle to swerve to the side of the blowout, making steering very difficult. In the case of a rear-tire blowout, the rear end of the vehicle sways from side to side.

Should a blowout occur:
• Hold the steering wheel firmly and take your foot off the accelerator, allowing your vehicle to slow down gradually.
• Brake only when the speed is sufficiently reduced to maintain control.
• Do not turn onto the shoulder of the road until you have your vehicle under control. If the blowout causes your vehicle to swerve onto the shoulder, don’t try to get back onto the pavement. Let the vehicle coast to a stop.
• Drive your vehicle off the roadway to a safe spot to change a tire.

Note: If you regularly inspect your tires for under inflation, cuts or bulges, you may be able to avoid a blowout. When driving, you may be warned by a thumping sound caused by a bulge in the tire or your vehicle may be pulling sideways because the tire is losing air rapidly. Power steering gives you more power to resist the side pull from a front tire blowout.
Losing a Wheel
The rules are basically the same as for a blowout.

Skid Control
Driving too fast often results in skidding, regardless of weather conditions. In fact, more people are killed or injured in dry-surface skids than in wet-surface skids.

To get control of your vehicle while skidding, you should simultaneously:
• take your foot off the accelerator or the brake;
• shift to neutral (or depress the clutch); and
• look and steer in the direction you would like to go.

As the vehicle straightens out (assuming the brakes haven’t locked), the front wheels should also be straightened out to prevent a skid in the opposite direction.

To keep from skidding, slow down as you approach danger spots and do not accelerate, brake or change direction quickly.
Emergency Braking
If you must stop in the shortest distance for an emergency, depress the brake pedal to its maximum. However, with this method you will lose your steering control.

Without Anti-lock Brakes
If your vehicle doesn’t have anti-lock brakes, slamming on the brakes will lock your wheels. If all four wheels are locked, the vehicle will slide approximately in the direction it was already going. Remember, without an anti-lock braking system, when your brakes are locked, you have very little steering control (if any at all), so do this only in an emergency.

An alternative method is to apply steady brake pressure without locking up the wheels. This is called threshold braking and requires practice and skill in order to perform properly. The advantage here is you maintain steering control as you come to a stop and you may be able to steer around an object rather than hit it.

With Anti-lock Brakes
Anti-lock braking systems will provide some degree of steering control when the brakes are fully applied. The amount of control will depend on the specific system, so check your owner’s manual for the best advice to follow.

Flooded Engine
Your engine floods when you have too much gas and not enough air in your car’s combustion chamber, making it impossible for the gas to ignite. Check your vehicle operating manual for directions.

Wet Brakes
Your brakes may fail when you go through a large puddle of water. To be sure that they’re working:

- Always test the brakes lightly after driving through deep water. They may pull to one side or may not work at all.

- You can “dry” the brakes by driving slowly and applying them lightly.
**Disabled Vehicle**

If your vehicle stalls or is involved in an accident, move it clear of traffic and try to:

- Park all four wheels off the travelled portion of the highway.
- If you have a standard shift, use the starter and low gear to pull your vehicle to the shoulder.
- Use the four-way flasher when your vehicle is coming to a stop, if your vehicle is stalled on a highway or if your speed is well below the speed limit.
- If you have reflectorized signs and/or flares place them 60 m in front and behind the vehicle, so that the danger may be seen by approaching drivers.
- If you cannot move your vehicle off the road, raise the hood to warn other motorists.

**Direct Collision Course**

If a vehicle suddenly approaches from the opposite direction in your lane:

- Brake hard. If speed can be reduced before the collision, the impact will be less severe.
- Head for the shoulder on the right-hand side of the road and sound the horn. The other driver may suddenly realize their actions and steer back onto their side of the road. **Never swerve to the left to avoid a collision.** You may then be in the path of oncoming traffic.
- Drive into the ditch if necessary. Many collisions are more serious than they have to be, simply because some drivers don’t accept the reality of a collision happening to them and “freeze.” Better to be in the ditch than be involved in a collision.
- Head for something that is capable of energy absorption to reduce the force on impact — for example, a bush, shrub or snowbank. Better to hit an object with a glancing blow rather than head-on. Sideswiping a guardrail, for instance, and bouncing off (some of the impact being absorbed), with the driver regaining control, has avoided more serious collisions.

By being alert at all times behind the wheel, you may gain that fraction of a second you would not otherwise have to determine your escape route.
Vehicle on Fire
Since this usually results from an electrical short circuit, turn off the ignition immediately. If it is a small fire, use a fire extinguisher or smother flames with earth, sand or large articles of clothing. If it is a large fire, move away from the vehicle and call the Fire Department. It’s wise to keep a hand fire extinguisher in the passenger compartment of your vehicle.

Vehicle Plunging into Water
Your vehicle will float from three to 10 minutes if the windows are closed. Your seatbelt can prevent you from being knocked unconscious during the vital moments required to escape. Doors initially will be difficult to open due to water pressure as the vehicle begins to sink or because of vehicle damage. As the vehicle fills with water, pressure inside and outside equalizes.

The best escape route is through the windows. If they’re power windows, roll them down immediately, because water will cause a short circuit in the electrical system. If you can’t open the windows, don’t panic.

Most vehicles will sink nose first, so the air trapped inside will be pushed to the rear of the compartment near the roof. It may be necessary for you to breathe this air while waiting for the pressure inside and outside to become equal; then it will be easier to open the door.

Vehicle in Contact with Electrical Wires
If you step out from a vehicle in contact with live electrical wires, you could be seriously injured or killed when your foot touches the ground — even if you’re wearing rubber boots. Should your vehicle ever be in contact with electrical wires:

1. Stay inside and try to drive away from the wires.

2. If you cannot free your vehicle from the wires, turn on your hazard lights, move off the road as far as you can and remain inside. Warn potential rescuers to stay away from the vehicle and the wires and ask them to contact the police.

3. If your vehicle is on fire and you must leave it, only do so by jumping out so as not to come in contact with both the vehicle and the ground at the same time. Also make sure to jump free of any wires.
**Suggested Emergency Equipment**

1. **Standard Emergency Equipment** — shovel, tow rope or chain, booster cables, flashlight, first-aid kit, basic tool kit, flares and fire extinguisher.

2. **Winter Emergency Equipment** — all of #1 plus: hatchet, chains or metal mats, windshield scraper, snow brush, gas line anti-freeze, winter clothing, winter boots, winter hat, mitts and blankets.

3. **Winter Survival Kit** — all of #1 and #2 plus: waterproof matches, compact stove with fuel, candles, sheet of plastic or canvas, light rope, blaze orange flag, carbon dioxide indicator, aluminum foil, tissues, 1.5 kg metal cans with plastic lids, dry foods and soups, plastic utensils.

**Important:** Always ensure your vehicle's fuel tank is full when driving under winter conditions. If you become stranded, your chances of survival are better when you stay with your vehicle.
11. Collisions

Upon Arriving at the Scene of a Collision:

• Park your vehicle off the roadway to prevent other vehicles from hitting it.

• In case of serious injury, call 911 or the nearest police station and an ambulance.

• Turn off the ignition of vehicles involved in the collision to prevent a fire.

• If a person is pinned in a vehicle, but unhurt, crawl into the vehicle and try to release that person. If an individual is hurt, however, do not attempt to move that person unless the vehicle is on fire. Should the person have to be moved, ensure that the head and spine are firmly supported.

• If you have flares or reflectorized signs, place them 60 m in front and behind the collision scene as a warning to approaching drivers; otherwise, use your four-way flasher. Occupants of your vehicle or bystanders should be positioned at both approaches to the collision, standing off the roadway, to warn vehicles.

• Put out the flares when they are no longer needed.

Even if you have not been trained in first aid, you may give the following assistance:

• If a person is unconscious, be sure their air passage is clear of foreign material. False teeth, chewing gum, vomit or mucus can block the air passage. If possible, gently turn their head to the side. If the victim is not breathing and you are familiar with mouth-to-mouth or artificial respiration, begin the procedure immediately.

• Stop bleeding by applying direct pressure with a clean piece of material over the wound. If there is a serious head injury, pressure should not be applied.

• Reassure the injured and stay with them until an ambulance or other vehicle is available to take them to the hospital.

• Give all information on the assistance you have provided to the ambulance attendant and to the police, who in turn can inform the hospital.
If You Are Involved in a Collision, You Must:

• Stop your vehicle immediately.
• Check to see if anyone is injured. If someone is, you must:
  — Get help, if possible. In the Winnipeg, Brandon and most rural areas, dial 911. In other areas, contact your local police or the RCMP by dialling “0” and asking for the police.
  — Have someone report the collision to the police for you as soon as possible if anyone is injured.
• In the case of a collision without serious injury or damage, you should move the vehicles from a major thoroughfare as soon as possible (eventually exchange particulars) in order to prevent other vehicles from hitting your vehicle.
• Whether or not anyone is injured, but damage has resulted to any vehicle or property, you must:
  — Give your name and address to anyone whose vehicle or property is damaged.
  — Give your driver’s licence and registration numbers.
  — Give the particulars of your insurance coverage and such other information that may be requested.
• If you collide with and damage an unattended vehicle or other property you must take reasonable steps to find and notify the owner of the unattended vehicle or property, and if you are unable to exchange names and addresses or identify yourself personally with the driver of the other vehicle or the owner of the property at the collision scene, you must leave your name and address on the vehicle or property.
• Where persons have been injured — no matter how slightly — or where the damage to all property exceeds $1,000, a report must be submitted to a peace officer as soon as possible but no later than seven days after the collision.
• Even if only your vehicle is damaged in a collision, you must report the collision to the police if damage exceeds $1,000 or someone is injured.

See Collision Report Form in the Forms section.
Section 2

Legal Consequences of Unsafe Driving
1. Driving While Impaired

**Alcohol**

Alcohol is a depressant, not a stimulant. It reduces alertness and slows normal reflexes. If you’ve had too much to drink, black coffee, food or a cold shower won’t sober you up — only time will eliminate alcohol from your body.

Impaired drivers are among the most dangerous, unpredictable individuals on our roads and account for about half of all traffic fatalities in Manitoba. That explains why, in this province, **the penalties for drinking and driving are severe.**

If your ability to drive is impaired, a charge of impaired driving can be laid regardless of what level of alcohol is found in your blood. Accordingly, the safest rule to follow is: **if you drink — don’t drive.**

Impaired drivers usually fail to recognize they are impaired. Alcohol or drug impairment delays reaction times, distorts vision and impairs judgment.

**Drugs**

**Prescription Drugs**

Tranquilizers, antidepressants, sleeping pills and similar drugs can affect driving ability even if taken in the prescribed dosage. Accordingly, if you continue to drive while impaired by any medication, you can be charged with driving while impaired. This will result in the same consequences as if you were impaired by alcohol. Discuss the possible effects of any medication with your doctor or pharmacist.

**Illegal Drugs**

Illicit drugs may cause hallucinations, hostility, and aggressiveness in addition to dulling normal thought processes and slowing down eye-hand coordination.

**Never mix drugs and alcohol — even in small quantities.**

**For information, contact:**

**Addictions Foundation of Manitoba**

What Can You Do to Prevent Other People from Driving While Impaired?

When you host a party, you can also take steps to discourage guests from driving home if they have had too much to drink. Here are some suggestions:

• Set up “house rules” that make driving home after drinking too much not acceptable. Tell your guests about these rules before they arrive! Then they can make alternative plans for going home if they plan to drink.

• Offer guests fruit juices, mineral water and soft drinks as alternatives to alcoholic beverages.

• Don’t serve “one for the road.” It’s a good idea to close the bar at least one hour before the party ends. Encourage guests to stay for a while by serving food and tea, coffee or other non-alcoholic beverages at this point.

• Have enough spare cash on hand to lend to friends for taxi fare.

• Be prepared to have some guests stay overnight if necessary. A little inconvenience and embarrassment (theirs, not yours) are far better than risking impaired driving.

You don’t have to stop with just yourself or family and friends. Those of us who belong to groups or clubs can challenge other members to share a leading role in preventing impaired driving. Many groups and organizations sponsor parties and other social events where alcohol is served. All members can participate in making sure no one drives after drinking. People can take turns not drinking so they may drive others home.
Drinking and Driving Anywhere is a Crime

Drinking and driving threatens everyone’s safety. Manitoba’s tough laws on drinking and driving are now even tougher and apply to all motor vehicles including Off-Road Vehicles (ORVs) and Special Mobile Machines (SMMs). An ORV is any motorized vehicle designed and adapted for cross-country travel on land, water, ice, snow, marsh or other natural terrain. Some examples of ORVs are:

• snowmobiles
• all-terrain vehicles
• dirt bikes

Special mobile machines are heavy or agricultural equipment, and some examples are:

• front-end loaders
• cranes
• forklifts
• graders
• tractors
• combines

If you drink and drive, regardless of whether it’s an ORV, special mobile machine, or a motor vehicle, you will lose the right to drive these types of vehicles.
What Are the Consequences?

Novice drivers who violate the zero blood alcohol restriction will be subject to a 24-hour roadside suspension. They will also be required to attend a show cause hearing where further suspension action will be considered. Novice drivers include drivers in the Learner and Intermediate Stage of GDL, Authorized Instruction in Class 5 or Class 6, and drivers in the first three years of the Full Stage Class 5 or Class 6.

Anyone who operates a motor vehicle or an Off-Road Vehicle (ORV) and has a blood alcohol concentration between .05 and .08 will face a variety of consequences including:

- An immediate 24-hour roadside licence suspension;
- A $50* driver’s licence reinstatement charge;
- A mandatory impaired driver’s assessment at your expense, if you have more than one 24-hour roadside warning suspension in three years.

In addition, any driver with a blood alcohol level over .08 or who refuses to provide a breath or blood sample to police, or refuses a Field Sobriety Test (FST) may face additional consequences including:

- An immediate 24-hour roadside licence suspension;
- An automatic three-month licence suspension;
- A vehicle impoundment except special mobile machines (SMMs);
- A mandatory impaired driver’s assessment at your expense;
- Additional driver’s licence premium of $1,000 or more.

Drivers convicted** of an alcohol-related or drug-related driving offence under The Criminal Code of Canada will be suspended and disqualified from driving any kind of motor vehicle. A conviction** will result in a court-imposed Canada-wide driving prohibition for a minimum one year, and a mandatory driver’s licence suspension from one year to life.

Some licence suspensions, disqualifications and court imposed driving prohibitions can be appealed to the Licence Suspension Appeal Board. If successful in their appeal, drivers may be required to participate in Manitoba’s Ignition Interlock Program for alcohol related driving suspensions and/or prohibitions.

*Charges and additional driver’s licence premiums are subject to change.

**A discharge under the Criminal Code of Canada for certain driving related offences may be treated as a conviction under The Highway Traffic Act.
2. Licence Suspension for Other Criminal Code of Canada Convictions

Driving a vehicle in Manitoba is a privilege. People convicted* of certain offences under The Criminal Code of Canada will lose that privilege. Some examples of these offences are: dangerous driving, criminal negligence, flight from police, auto arson, auto vandalism, take vehicle without owner’s consent, auto theft, possession of property obtained by crime, and possess, sell or purchase master keys.

A conviction* of any of these offences results in an automatic driver’s licence suspension or eligibility to obtain a licence. It also disqualifies you from operating an off-road vehicle. Anyone convicted of any such offence faces a driver’s licence suspension ranging from one year to life. Offenders under 16 years of age will have their suspension start on their 16th birthday.

*A discharge under the Criminal Code of Canada for certain driving related offenses may be treated as a conviction under The Highway Traffic Act.
3. Driving While Suspended — Consequences

Vehicles and off-road vehicles (ORVs) will be immediately impounded for a minimum of 30 days for driving while the person is suspended or prohibited from driving, or if the person is disqualified from operating an ORV.

The vehicle will be impounded even if it is owned or registered by someone other than the operator at the time of the offence. It is the owner’s responsibility to ensure that the user is not suspended, prohibited or disqualified. Vehicle owners will be responsible for the costs of towing and storage, plus an impoundment fee, which must be paid before a vehicle is released.

Additional consequences of driving while suspended can include:

- Imprisonment for up to five years and/or fines of up to $2,000;
- A non-appealable licence prohibition under The Criminal Code, which means that a work licence cannot be obtained;
- A lifetime driver’s licence suspension under The Highway Traffic Act; and,
- Additional driver’s licence premiums once the driver’s licence is reinstated.
4. Driver Improvement and Control Program

The Driver Improvement and Control (DI&C) Program aims to make Manitoba’s roads safer for all. It encourages Manitobans to make safe driving their habit for a lifetime.

The DI&C Program strives to:
- prevent unsafe driving from becoming a habit
- undo unsafe driving habits that are already established

Early intervention is key.

The program can intervene in different ways. How it intervenes depends on the driver and his or her unsafe driving behaviour.

How it Works

The DI&C Program defines two categories of drivers: novice and experienced.

A novice driver has never held a Full Stage driver’s licence for more than three years. This includes drivers who hold a Learner or Intermediate Stage or are in the first three years of Full Stage licence under the Graduated Driver Licensing Program (GDL). It also includes a learner driver not under GDL who has never held a Full Stage licence.

An experienced driver has held a Full Stage driver’s licence for at least three years.

Different interventions may apply for novice or experienced drivers, depending on how serious the unsafe driving was and how often it occurred. For novice drivers, the interventions begin earlier than for experienced drivers.

For both novice and experienced drivers, these driving behaviours lead to interventions under the DI&C Program:
- at fault accidents
- traffic convictions
- 24-hour roadside suspensions for operating a motor vehicle with blood alcohol concentration levels of .08 or lower

None of the interventions under the DI&C Program are based on your age or gender — only on your driving behaviour.
Interventions Applying to All Drivers

• Interventions are based on driver experience and the severity and frequency of the driver’s involvement.

The DI&C Program may:

• send you an advisory letter about your driving
• send you a warning letter about your driving
• require you to complete a driver course
• require you to attend a Show Cause Hearing

The possible outcomes from a Show Cause Hearing include:

• driver’s licence suspension
• required completion of a driver course or driver examinations
• further restrictions on your driver’s licence
• no action

Drivers who don’t complete a required course or exam will have their driver’s licence cancelled and their driver’s licence charges refunded.
5. Driver Safety Rating

Your Driver Safety Rating is your position on a scale with 36 active levels. Which level you’re on depends on your driving record. This affects how much you pay for your Autopac and driver’s licence premiums.

If you’re a new Manitoba driver with your first driver’s licence, you’ll be at the “base” level on the Driver Safety Rating scale for both vehicle and driver’s licence premiums. After that, for each year you drive safely, you’ll move up the scale and start saving.

How the Scale Works

Each year, we’ll send you a notice showing you where you are on the scale, and what you owe for the next year. We place you on the scale using your driving record for the past year.

No traffic convictions or at-fault accidents? You’ll move up the scale. If you have traffic convictions or at-fault accidents, you’ll move down the scale.

Moving up the scale means more merits, which usually results in lower premiums. Moving down the scale means fewer merits (or more demerits), along with higher premiums, in most cases.

Remember, each year of safe driving = one level up the scale.
6. Safe Driving Programs

Mature Driver Program
Mature Driver is an educational program designed to help the senior driver to continue to drive safely. A qualified senior driving instructor, who knows the effects of aging on driving ability, teaches how to compensate for these effects.

Mature Driver program focuses on updating driving knowledge, sharpening driving skills and providing techniques to compensate for normal age-related changes that affect driving ability.

Safety Services Manitoba delivers the Mature Driver program. Courses are available in the Winnipeg, Central, Interlake, Eastman, Westman and Parkland regions of the province.

For more information, contact:

Safety Services Manitoba
Telephone: 204–949–1085
Website: www.safetyservicesmanitoba.ca
Parking Entitlement for People with Physical Disabilities

You may apply for a parking permit that allows you to park in spaces designated for disabled persons if you have a permanent or temporary physical disability requiring the full-time assistance of a mobility aid such as a wheelchair, cane, crutches or walker, or if your disability restricts you from walking more than 50 m without great difficulty or danger to your health or safety.

An application form may be obtained from any regional office of the Society for Manitobans with Disabilities, your medical practitioner or local municipal office.

The fee is $12.50 for a permit or permit renewal. If your disability is permanent, the permit is valid for 36 months. Temporary permits are available for the anticipated length of the disability as certified by a medical practitioner, up to 36 months.

Non-profit organizations can apply for permits for vehicles used to transport people with physical disabilities.

Permits must be displayed on the rearview mirror of a vehicle so they are clearly visible from outside the vehicle for enforcement purposes.

Permits are to be displayed only when parked in disabled parking, not while driving.

To apply for a permit or for further information, contact:

Parking Permit Program
1111 Winnipeg Avenue
Winnipeg, Manitoba R3E 0S2
Telephone: 204–975–3257
Toll-free: 1–800–836–5551
TTY: 204–975–3239
Fax: 204–975–3240
Email: info@smd.mb.ca
Website: www.smd-services.ca

Remember: It is illegal to park in a space designated for disabled persons unless you are disabled or you are transporting a disabled person and a valid disabled parking permit is prominently displayed in your vehicle.
Disabled Driver Assessment and Management Program

The Disabled Driver Assessment & Management Program at the Health Sciences Centre is a comprehensive two-part program, which includes a clinical pre-screening assessment by an Occupational Therapist and a practical on-road evaluation. A wide range of clients are served, including those with neurological and orthopedic disabilities (congenital and acquired), as well as psychiatric disorders and disabilities associated with aging.

An occupational therapist prepares a report on the results of the pre-screening and on-road evaluations. This report details the driver’s abilities, areas of concern and recommendations for vehicle modifications and is sent to the Medical Records Department of Manitoba Public Insurance, the referring physician and the Health Sciences Centre Rehabilitation Engineering Department.

Clients must be referred in writing by their physician. To obtain a referral to the program, the client or physician should notify:

Manitoba Public Insurance
Medical Records
Box 6300
Winnipeg, Manitoba R3C 4A4
Telephone: 204–985–1900

Vehicle Modifications for People with Physical Disabilities

If you are a disabled driver holding a valid Manitoba driver’s licence, you may obtain a wide range of vehicle modifications at no cost through the Health Sciences Centre Rehabilitation Engineering Department.

For specific information regarding vehicle modifications, contact:

Health Sciences Centre
Rehab Engineering Department
Special Devices Program
59 Pearl Street
Winnipeg, Manitoba R3E 3L7
Telephone: 204–787–2366
Environmental Consequences of Driving

If you keep a vehicle well tuned and maintained, it will help control the emission of pollutants. However, even the best maintained vehicles will continue to emit gases such as carbon dioxide, carbon monoxide, nitrogen oxides and sulphur dioxide, and volatile organic compounds.

These gases adversely affect our health and are significant enough to affect the environment.

The following are some things drivers can do to reduce these effects:

1. Keep your vehicle well tuned and maintained and tires properly inflated. Check pollution controls regularly.

2. Drive only when you must and consider walking when relatively short distances are involved.

3. Don’t let your engine idle while your car is parked.

4. Before buying or leasing a vehicle, check its fuel efficiency. The less fuel a vehicle burns, the less pollution it creates, and the more money you save at the gas pump.

Consider taking the bus as much as possible. Cars produce 50% of the carbon dioxide emitted by vehicles. The carbon dioxide per rider produced by the average family car is almost four times that produced per rider by a half-empty bus.
Fuel Efficient Driving Techniques

Safety should be your number one concern every time you get behind the wheel of a vehicle. The good news is that practicing defensive driving techniques not only improves road safety, it also reduces fuel consumption and cuts exhaust emissions that contribute to climate change and urban smog. Depending on your driving habits and how often you drive, these basic techniques and useful tips could save you hundreds of dollars a year in fuel and maintenance costs:

- It is both safer and more fuel-efficient to maintain a steady speed on the road, speed up smoothly when passing or merging with faster traffic and avoid hard braking. European tests have shown that aggressive driving — frequent, rapid speeding up and hard braking — can increase fuel consumption by up to 39%.
- Never drive faster than the posted speed limit. Increasing your highway cruising speed from 100 km/h to 120 km/h will increase fuel consumption by up to 20%.
- Plan your trips to combine errands and to avoid traffic jams, steep hills, road construction, etc. Combining a number of short trips into one longer one allows your engine and drivetrain to reach peak operating temperature, which is not possible on trips of less than 5 km. Avoiding trouble spots shortens your travel time and reduces unnecessary idling.
- If you are driving a vehicle with a manual transmission, learn how to use it properly for maximum fuel savings. A tachometer can help you shift the transmission at the most fuel efficient engine speeds (the owner’s manual will indicate these speeds).
- If you have cruise control, use it for highway driving to maintain a constant safe speed and save fuel. The exception is on hilly terrain, where it’s a good idea to allow the vehicle’s speed to drop slightly going uphill and then let gravity help you build up speed again (to a safe level) going down the other side. Avoid using cruise control while driving on slippery or winter roads.
- In summer, minimize your use of air conditioning. Operating an air conditioner in hot weather can increase fuel consumption by more than 20% in city driving. A more fuel-efficient option for staying cool is to open a window. However, at highway speeds, use your car’s flow-through ventilation — open windows and sunroofs increase aerodynamic drag, which makes the engine work harder and consume more fuel. If you must use your vehicle’s air conditioning, avoid running it continuously; shut it off after the interior is cool or set the controls to a comfort level that allows the system to cycle.
• Check tire pressure at least once a month when the tires are cold (i.e. the vehicle had been parked for at least three hours or had not been driven more than 2 km). If you have to drive more than 2 km to add air, check the tires before you leave and then add the amount of air that is missing from this reading. Inflate the tires to the recommended pressure, usually indicated on the car door, glove compartment or in the owner’s manual. With proper tire inflation, your car will burn less fuel and be safer to drive. A vehicle with tires that are under inflated by 6 psi (42 kPa) increases fuel consumption by 3%.

• Use a block heater in the winter to warm the engine oil and make cold starts easier on your engine parts. Your vehicle’s oil does not freeze when the temperature dips below 0°C, but it does get much thicker. This means your engine has to work harder and use more fuel. Use a timer to switch the block heater on two hours before you plan to drive. Proper use of a block heater can improve your vehicle’s overall fuel economy by as much as 10%. Don’t leave your block heater on overnight or your energy savings will disappear in a higher electricity bill.

• Follow the vehicle manufacturer’s recommended operating procedures and maintenance schedule in your owner’s manual. Regular maintenance such as oil and filter changes will not only prevent early breakdown of your vehicle’s parts, it will also keep them operating at their most fuel-efficient level. A clogged air filter can increase fuel consumption by up to 10%. Regular maintenance will keep your vehicle operating safely, save you money and, at the same time, help the environment.

• Remote car starters are handy on cold winter mornings, but don’t start your car too soon — in most driving conditions, today’s modern engines need to warm up for only 30 seconds, even on cold mornings. Also, allowing your car to idle too long wastes gas and produces unnecessary exhaust emissions.

• Idling for more than 10 seconds, except in traffic, wastes more fuel than stopping your engine and restarting it again. At the end of the day, stopping unnecessary idling will benefit the environment and save you money.

You will find other useful tips and tools at www.oee.nrcan.gc.ca/vehicles.

Organ and Tissue Donation
Every year in Canada, thousands of people are waiting for organ and tissue transplants. You can make the difference in the lives of many people by deciding to become a donor. Everyone has the potential to be an organ and tissue donor. The health of the donor, not the age, is the most important thing considered. Generally, organ donors are healthy people who have suffered an irreversible brain injury, as in a motor vehicle accident or a brain hemorrhage. Organs and tissues that can be donated include: kidneys, heart, lungs, liver, pancreas, small bowel, corneas, solid bones and joints, skin and heart valves.

Sign a Donor Card Today and Discuss Your Wishes with Your Family!
Signing a donor card is one way to indicate your wishes to be an organ and tissue donor. However, donor cards are often not available at the time of the donor’s death. Therefore, it is important that you discuss your wishes with your family. Other people you may want to inform of this wish are your clergy and family doctor. A Living Will is another place where you can record your wishes. If you have named a proxy in your Living Will, the proxy has precedence over the legal next-of-kin to give consent for organ and tissue donation if you have discussed your wishes with your proxy.

Drivers under the age of 18 years require the signature of a parent or guardian. Simply cut out the card on the following page, complete the information, and keep it with your Manitoba Health Registration Certificate or Driver’s Licence so it’s visible for law enforcement and hospital officials. Your donor card is a legal document that allows you to give any or all tissues and organs after death.
DONOR CARD

Direction under *The Human Tissue Gift Act* C.C.S.M. c. H180

I. _______________________________________________________________________________

direct the use, after my death (please check ✓) of:

❑ any needed organs or parts of my body; or
❑ the following specified organs or parts of my body, namely:

____________________________________________________________________________________

for the following purposes:

❑ transplant and other therapeutic purposes;
❑ medical education;  ❑ scientific research.

- Tissue Bank Manitoba 204-940-1750
- Lions Eye Bank of Manitoba and Northwest Ontario Inc. 204-788-8419

(R-09/09)
Parental or Legal Guardian Approval for a Person Under 18 Years of Age to Apply for a Driver’s Licence

Note: This form must be submitted to supervising staff before a driver’s licence applicant under 18 years of age will be allowed to take a knowledge test. Proof of age and identity are required before a knowledge test can be taken.

I/We, the undersigned, being the parent(s) or legal guardian(s) of:

_____________________________________

(Child’s full name)

whose date of birth is:

_____________________________________

(dd/mm/yyyy)

do hereby approve said applicant for a driver’s licence, including a digital photograph, in accordance with The Drivers and Vehicles Act.

The person approving an application of a minor for a driver’s licence has the right to submit, in writing, a request to the Registrar to cancel the licence, and the Registrar must comply with such request and cancel said licence while the applicant is a minor.

Collision Diagram
In this space:

- Outline roadway with solid lines.
- Indicate centre line of road.
- Identify all streets.
- Indicate North by arrow.
- Indicate all measurements (skid marks, road widths, etc.)

Remember: You must report the collision to the police when a person is injured — no matter how slightly — or when the combined property damage exceeds $1,000.
Claim Reporting

For fast, convenient service, Manitoba motorists can report their Autopac claims over the telephone. When you call, please have available your driver’s licence, vehicle registration, and any information you have about the accident.

Hours
Monday to Friday: 7:00 a.m. to 9:00 p.m.
Saturday: 8:30 a.m. to 4:00 p.m.
Closed Sunday

Reporting Glass Claims
Inside Winnipeg: 204–985–7000
Outside Winnipeg (toll-free): 1–800–665–2410
TTY: 204–985–8832

Reporting damage claims other than glass
Inside Winnipeg: 204–985–7000
Outside Winnipeg (toll-free): 1–800–665–2410
TTY: 204–985–8832

Winnipeg
We’ll give you the first available estimate appointment at one of the following locations:

• 15 Barnes Street (at Bison Drive)
• 1284 Main Street
• 40 Lexington Park (at Gateway Road)
• 125 King Edward Street
• 930 St. Mary’s Road (Service available in French)
• 420 Pembina Highway
• 1103 Pacific Avenue
Outside Winnipeg
We’ll give you the first available appointment at one of the following locations:

(Note: Road estimates may be available for some remote-area customers.)

• Arborg | 323 Sunset Boulevard
• Beausejour | 848 Park Avenue
